Scientific and Technical Aerospace Reports, 1991. *Determinations of the National Mediation Board*. United States. National Mediation Board, 1994. **Aviation Safety and Pilot Control**. National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on the Effects of Aircraft-Pilot Coupling on Flight Safety, 1997-02-28. Adverse aircraft pilot coupling (APC) events include a broad set of undesirable and sometimes hazardous phenomena that originate in anomalous interactions between pilots and aircraft. As civil and military aircraft technologies advance, interactions between pilots and aircraft are becoming more complex. Recent accidents and other incidents have been attributed to adverse APC in military aircraft. In addition, APC has been implicated in some civilian incidents. This book evaluates the current state of knowledge about adverse APC and processes that may be used to eliminate it from military and commercial aircraft. It was written for technical government and administrative decisionmakers and their technical and administrative support staffs, key technical managers in the aircraft manufacturing and operational industries, stability and control engineers, aircraft flight control system designers, research specialists in flight control, flying qualities, human factors, and technically knowledgeable lay readers.

Safety Recommendation, Global Aviation English Research. Eric Friginal, Malila Prado, Jennifer Roberts, 2024-12-12. Advocating for best practices within aviation. English language research. This volume offers deeper insights into the practical, policy-based and societal contexts in which International Civil Aviation Organization (ICAO) language standards are embedded. English is the official language for international pilot air traffic controller (ATC) communications mandated by the ICAO. It is also the de facto universal common language for all other forms of communication, including the language of maintenance technicians and maintenance manuals, aeronautical engineers, cabin crew, ground staff, and aviation business professionals. In this book, renowned academic experts and aviation professionals come together to explore a variety of research trends, providing an effective and efficient analysis of the language needs of the aviation industry, its future directions, and an extended look at linguistic principles in action. Chapters engage in detail with research data, case studies, and concrete examples of interactional tasks, transactional exchanges, and radiotelephony. They also examine the common vocabulary and phrasal patterns in aviation discourse required to communicate successfully in various roles and contexts within the aviation industry. The result is a meaningful contribution to the global development and improvement of standards of aviation research, investigations of the role of language in aviation accidents, and research

into language as a human factor in aviation communications customer service and intercultural mis communication
