Airborne Chemical Hazards provides the answers to these questions and more Science based and quantitative the book introduces methods for controlling exposures in diverse settings focusing squarely on airborne chemical hazards It bridges the gap between existing knowledge of physical principles and their modern application with a wealth of recommendations techniques and tools accumulated by generations of IH practitioners to control chemical hazards Provides a unique comprehensive tool for facing the challenges of controlling chemical hazards in the workplace Although William Popendorf has written the book at a fundamental level he assumes the reader has some experience in science and math as well as in manufacturing or other work settings with chemical hazards but is inexperienced in the selection design implementation or management of chemical exposure control systems Where the book is quantitative of course there are lots of formulae but in general the author avoids vague notation and long derivations *Industrial Ventilation: a Manual of Recommended Practice. 13th Ed* American Conference of Governmental Industrial Hygienists,1974 *ANSI/AIHA Z9.2-2006 Fundamentals Governing the Design and Operation of Local Exhaust Ventilation Systems* Aiha,2007 This new standard describes fundamental good practices related to the commissioning design selection installation operation maintenance and testing of local exhaust ventilation LEV systems used for the control of employee exposure to airborne contaminants **Exposure Assessment and Safety Considerations for Working with Engineered Nanoparticles** Michael J.
