Alan Plumb, 2007-12-19 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science Atmosphere Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material

**Atmosphere—Ocean Dynamics** Adrian E. Gill, 2016-06-03 Atmosphere Ocean Dynamics deals with a systematic and unified approach to the dynamics of the ocean and atmosphere The book reviews the relationship of the ocean atmosphere and how this system functions The text explains this system through radiative equilibrium models the book also considers the greenhouse effect the effects of convection and of horizontal gradients and the variability in radiative driving of the earth Equations in the book show the properties of a material element mass conservation the balance of scalar quantity such as salinity and the mathematical behavior of the ocean and atmosphere The book also addresses how the ocean atmosphere system tends to adjust to equilibrium both in the absence and presence of driving forces such as gravity The text also explains the effect of the earth's rotation on the system as well as the application of forced motions such as that produced by wind or temperature changes The book explains tropical dynamics and the effects of variation of the Coriolis parameter with latitude The text will be appreciated by meteorologists environmentalists students studying hydrology and people working in general earth sciences

*Mathematical Study of Degenerate Boundary Layers: A Large Scale Ocean Circulation Problem* Anne-Laure Dalibard, Laure Saint-Raymond, 2018-05-29 This paper is concerned with a complete asymptotic analysis as  $E \rightarrow 0$  of the Munk equation  $\partial_x \psi + E \Delta \psi = \tau$  in a domain  $\Omega \subset \mathbb{R}^2$  supplemented with boundary conditions for  $\psi$  and  $\partial_n \psi$  This equation is a simple model for the circulation of currents in closed basins the variables  $x$  and  $y$  being respectively the longitude and the latitude A crude analysis shows that as  $E \rightarrow 0$  the weak limit of  $\psi$  satisfies the so called Sverdrup transport equation inside the domain namely  $\partial_x \psi = 0$  while boundary layers appear in the vicinity of the boundary

**Regional Fisheries Oceanography of the California Current System** Sam McClatchie, 2013-09-30 The California Current System is one of the best studied ocean regions of the world and the level of oceanographic

information available is perhaps only surpassed by the northeast and northwest Atlantic. The current literature later than 1993 offers no comprehensive integrated review of the regional fisheries oceanography of the California Current System. This volume summarizes information of more than 60 year California Cooperative Oceanic Fisheries Investigation CalCOFI. While providing a large bibliography the intent was to extract themes relevant to current research rather than to prepare a compendious review of the literature. The work presents a useful review and reference point for multidisciplinary fisheries scientists and biological oceanographers new to working in the California Current System and to specialists wishing to access information outside their core areas of expertise. In addition it aims to deliver an up to date reference to the current state of knowledge of fisheries oceanography in the California Current System.

**Bottom Gravity Currents and Overflows in Deep Channels of the Atlantic Ocean** Eugene G. Morozov, Roman Y. Tarakanov, Dmitry I. Frey, 2022-01-01

This book is dedicated to the analysis of bottom waters flows through underwater channels of the Atlantic Ocean. The study is based on recent observations of the authors, analysis of historical data, numerical modeling and literature review. For example, studying both the measurements from the World Ocean Circulation experiment in the 1990s and recent measurements reveals the decadal variations of water properties in the ocean. Seawater is cooled at high latitudes, descends to the ocean bottom and slowly flows to the tropical latitudes and further. This current is slow in the deep basins but intensifies in the abyssal channels connecting the basins. The current overflows submarine topographic structures and sometimes forms deep cataracts when water descends over slopes by several hundred meters. The flow of Antarctic Bottom Water (AABW) is studied on the basis of CTD sections combined with Lowered Acoustic Doppler Profiling (LADCP) carried out annually and long term moored measurements of currents. This book is a collection of oceanographic data interpretation and analysis which can be used by field oceanographers, specialists in numerical modeling and students who specialize in oceanography.

*Contemporary Computational Mathematics - A Celebration of the 80th Birthday of Ian Sloan* Josef Dick, Frances Y. Kuo, Henryk Woźniakowski, 2018-05-23. This book is a tribute to Professor Ian Hugh Sloan on the occasion of his 80th birthday. It consists of nearly 60 articles written by international leaders in a diverse range of areas in contemporary computational mathematics. The book also presents state of the art knowledge in many computational fields such as quasi Monte Carlo and Monte Carlo methods for multivariate integration, multi level methods, finite element methods, uncertainty quantification, spherical designs and integration on the sphere, approximation and interpolation of multivariate functions, oscillatory integrals and in general in information based complexity and tractability as well as in a range of other topics. The book also tells the life story of the renowned mathematician, family man, colleague and friend who has been an inspiration to many of us. The reader may especially enjoy the story from the perspective of his family, his wife, his daughter and son as well as grandchildren who share their views of Ian. The clear message of the book is that Ian H Sloan has been a role model in science and life. The
