Digital Airborne Camera Rainer Sandau, 2009-12-10 Digital airborne cameras are now penetrating the fields of photogrammetry and remote sensing Due to the last decade s results in research and development in the fields of for instance detector technology computing power memory capacity position and orientation measurement it is now possible to generate with this new generation of airborne cameras different sets of geometric and spectral data with high geometric and radiometric resolutions within a single flight This is a decisive advantage as compared to film based airborne cameras The linear characteristic of the opto electronic converters is the basis for the transition from an imaging camera to an images generating measuring instrument Because of the direct digital processing chain from the airborne camera to the data products there is no need for the processes of chemical film development and digitising the film information Failure sources as well as investments and staff costs are avoided But the effective use of this new technology requires the knowledge of the features of the image and information generation its possibilities and its restrictions This book describes all components of a digital airborne camera from the object to be imaged to the mass memory device So the image quality influencing processes in nature are described as for instance the reflection of the electromagnetic sun spectrum at the objects to be imaged and the influence of the atmosphere Also the essential features of the new digital sensor system their characteristics and parameters are addressed and put into the system context The complexity of the cooperation of all camera components as for instance optics filters detector elements analogue and digital electronics software and so forth becomes transparent The book includes also the description of example systems

Broken Symmetry in Curved Spacetime and Gravity Charles D. Lane, 2020-11-13 This book contains several recent articles written about broken spacetime symmetry The context is curved spacetime as used in General Relativity and the broken symmetry most discussed is Local Lorentz Symmetry While there is currently no experimental evidence for broken Lorentz symmetry in nature it is an object of great study from theoretical phenomenological and experimental perspectives All three appear in this volume There are three review articles in this volume Fabian Kislal summarizes astrophysical probes of Lorentz violation especially those using polarized light Michael Seifert discusses a particular limit of the Standard Model Extension that is useful for relating theoretical and experimental ideas and Marco Schreck describes circumstances under which gravitational Cerenkov radiation could arise from Lorentz violation The other three articles focus more on original research Charles Lane and Quentin Bailey relate a particular theory of noncommutative geometry to the curved spacetime Standard Model Extension Yuri Bonder and Christobal Corral consider the existence of spacetime symmetries in models with explicit Lorentz violation and Pawel Gusin et al study a spacetime transformation that relates the inside and outside of a nonrotating black hole
