Below-Ground Interactions in Ecological Processes Oren Shelef, Philip G. Hahn, Ana Pineda, Mysore V. Tejesvi, Ainhoa

Martinez-Medina, 2020-01-29 Aboveground interactions between plants and organisms have served as a foundation of ecological and evolutionary theories. Accumulating evidence suggests that interactions that occur belowground can have immense influence on eco evolutionary dynamics of plants. Despite the increasing awareness among scientists of the importance of belowground interactions for plant performance and community dynamics, they have received considerably less theoretical and empirical attention compared to aboveground interactions. In this eBook we aim to highlight the overlooked roles of belowground interactions and outline their myriad ecological roles from affecting soil health through impacting plant interactions with above ground fauna. This eBook with 18 articles and an Editorial includes conceptual contribution together with original research work. The chapters are exploring the roles of belowground biotic interactions in the context of ecological processes both below and above ground.

Brussaard,M.J. Kooistra,2013-10-22 Some pioneers in soil research such as M ller and Kubi na were as much biologists as

they were soil scientists and the legendary biologist Charles Darwin was foresighted in recognizing the earthworms as instrumental in reworking the soil thereby forming what he called vegetable mould Still soil science has largely been the realm of physicists and chemists over the past decades Whatever the reason this picture is rapidly changing Until recently research on the transport and transformation of elements in soil was often concerned with either soil biota plant relationships or with soil structure plant relationships if the biota were considered at all but very few studies explicitly took the interrelationships between soil structure and soil biota into account The conference on Soil Structure Soil Biota Interrelationships held at Wageningen The Netherlands 24 28 November 1991 was meant to bridge that gap focussing on methods of research organized in three levels features processes and effects The proceedings of the conference are testimony of the need to intertwine the biological morphological physical and chemical disciplines in soil research to understand better and forecast soil properties and processes as related to land use for agricultural and other purposes This book should be of particular interest to soil scientists and ecologists who feel the need for a cross disciplinary approach in soils research It should also be a rich source of teaching material for courses in soil science and soil ecology at graduate level and above with ample reference to studies on land use as related to agriculture and the environment

Weed Biology and Management Inderjit, 2013-11-11 Weeds hold an enigmatic and sometimes controversial place in agriculture where they are generally reviled grudgingly tolerated and occasionally admired In most cases growers make considerable effort to reduce the negative economic impact of weeds because they compete with crops for resources and hinder field operations thereby affecting crop productivity and quality and ultimately the sustainability of agriculture Weed control in production agriculture is commonly achieved through the integration of chemical biological and mechanical management methods Chemicals herbicides usually inhibit the growth and establishment of weed plants by

interfering with various physiological and biochemical pathways Biological methods include crop competition smother crops rotation crops and allelopathy as well as specific insect predators and plant pathogens Mechanical methods encompass an array of tools from short handled hoes to sophisticated video guided robotic machines Integrating these technologies in order to relieve the negative impacts of weeds on crop production in a way that allows growers to optimize profits and preserve human health and the environment is the science of weed management **Plant-Plant Allelopathic Interactions II** Udo Blum,2014-03-24 This volume presents detailed descriptions and analyses of the underlying features issues and suppositions associated with seed and seedling laboratory bioassays presented in a previous volume It is however broader in scope and substance in that the information provided is relevant to all water soluble compounds released to soil by putative allelopathic living plants and their litter and residues It is ultimately an attempt to update and expand the practical guidelines for designing laboratory bioassays that have previously been provided in the literature with the hope that the designs of future seed and seedling laboratory bioassays will become more relevant to field systems Standard references have been included to provide background and additional details This volume has been written specifically for researchers and their graduate students who are interested in studying plant plant allelopathic interactions **Environmental Science** Daniel D.
