Molecular Engineering of Nanosystems Edward A. Rietman, 2013-03-09 Molecular nanotechnology is an emerging technology that allows us to build materials and systems with atomic and molecular precision by manipulating atoms and molecules at very small scales ultimately at the single molecule scale Since the properties of materials depend on how their atoms are arranged the ability to manipulate atoms and molecules at the nano scale will allow us to create new materials to improve current materials and to build systems heretofore only dreamt of The implications of this technology are great continued revolutions in computer chip technology continued revolutions in manufacturing new and stronger materials and highly precise medical instruments and treatments It is only recently that advances in scanning probe microscopy biotechnology mainly protein and genetic engineering and solution phase chemistry have been defined as tools to implement the technology These and other advances in the technologies of physics chemistry and biology are converging to provide the methodology for a molecular scale technology This book provides the professional with an overview of current methodologies in the field with emphasis on the implementation of current research
