Banach Space Complexes C. -G. Ambrozie, Florian-Horia Vasilescu, 1995-08-31 **Banach Space Complexes** C.-G. Ambrozie, Florian-Horia Vasilescu, 2012-12-06 The aim of this work is to initiate a systematic study of those properties of Banach space complexes that are stable under certain perturbations A Banach space complex is essentially an object of the form $1 \rightarrow X_0 \rightarrow X_1 \rightarrow \dots \rightarrow X_p \rightarrow 0$ where p runs a finite or infinite interval of integers X_p are Banach spaces and $d_p: X_p \rightarrow X_{p-1}$ are continuous linear operators such that $d_p d_{p+1} = 0$ for all indices p In particular every continuous linear operator $S: X \rightarrow Y$ where X, Y are Banach spaces may be regarded as a complex $0 \rightarrow X \xrightarrow{S} Y \rightarrow 0$ The already existing Fredholm theory for linear operators suggested the possibility to extend its concepts and methods to the study of Banach space complexes The basic stability properties valid for semi Fredholm operators have their counterparts in the more general context of Banach space complexes We have in mind especially the stability of the index i.e the extended Euler characteristic under small or compact perturbations but other related stability results can also be successfully extended Banach or Hilbert space complexes have penetrated the functional analysis from at least two apparently disjoint directions A first direction is related to the multivariable spectral theory in the sense of J. L. *Complex Analysis on Infinite Dimensional Spaces* Sean Dineen, 2012-12-06 Infinite dimensional holomorphy is the study of holomorphic or analytic functions over complex topological vector spaces The terms in this description are easily stated and explained and allow the subject to project itself initially and innocently as a compact theory with well defined boundaries However a comprehensive study would include delving into and interacting with not only the obvious topics of topology several complex variables theory and functional analysis but also differential geometry Jordan algebras Lie groups operator theory logic differential equations and fixed point theory This diversity leads to a dynamic synthesis of ideas and to an appreciation of a remarkable feature of mathematics its unity Unity requires synthesis while synthesis leads to unity It is necessary to stand back every so often to take an overall look at one's subject and ask How has it developed over the last ten twenty fifty years Where is it going What am I doing I was asking these questions during the spring of 1993 as I prepared a short course to be given at Universidade Federal do Rio de Janeiro during the following July The abundance of suitable material made the selection of topics difficult For some time I hesitated between two very different aspects of infinite dimensional holomorphy the geometric algebraic theory associated with bounded symmetric domains and Jordan triple systems and the topological theory which forms the subject of the present book **Analysis and Mathematical Physics** H. Triebel, 1987-01-31 *Introduction to Complex Analysis in Several Variables* Volker Scheidemann, 2005-09-16 This book provides a comprehensive introduction to complex analysis in several variables One major focus of the book is extension phenomena alien to the one dimensional theory Hartog's Kugelsatz theorem of Cartan Thullen Bochner's theorem The book primarily aims at students starting to work in the field of complex analysis in several variables and teachers who want to prepare a university lecture Therefore the book contains more than 50

examples and more than 100 supporting exercises *Lie Algebras of Bounded Operators* Daniel Beltita, Mihai Sabac, 2012-12-06 In several proofs from the theory of finite dimensional Lie algebras an essential contribution comes from the Jordan canonical structure of linear maps acting on finite dimensional vector spaces On the other hand there exist classical results concerning Lie algebras which advise us to use infinite dimensional vector spaces as well For example the classical Lie Theorem asserts that all finite dimensional irreducible representations of solvable Lie algebras are one dimensional Hence from this point of view the solvable Lie algebras cannot be distinguished from one another that is they cannot be classified Even this example alone urges the infinite dimensional vector spaces to appear on the stage But the structure of linear maps on such a space is too little understood for these linear maps one cannot speak about something like the Jordan canonical structure of matrices Fortunately there exists a large class of linear maps on vector spaces of arbitrary dimension having some common features with the matrices We mean the bounded linear operators on a complex Banach space Certain types of bounded operators such as the Dunford spectral Foia decomposable scalar generalized or Colojoara spectral generalized operators actually even enjoy a kind of Jordan decomposition theorem One of the aims of the present book is to expound the most important results obtained until now by using bounded operators in the study of Lie algebras

Complex Analysis and Dynamical Systems III Mark L'vovich Agranovskii, 2008 The papers in this volume cover a wide variety of topics in the geometric theory of functions of one and several complex variables including univalent functions conformal and quasiconformal mappings minimal surfaces and dynamics in infinite dimensional spaces In addition there are several articles dealing with various aspects of approximation theory and partial differential equations Taken together the articles collected here provide the reader with a panorama of activity in complex analysis drawn by a number of leading figures in the field **Complex Analysis in Banach Spaces** Jorge Mujica, 2010-03-18 The development of complex analysis is based on issues related to holomorphic continuation and holomorphic approximation This volume presents a unified view of these topics in finite and infinite dimensions A high level tutorial in pure and applied mathematics its prerequisites include a familiarity with the basic properties of holomorphic functions the principles of Banach and Hilbert spaces and the theory of Lebesgue integration The four part treatment begins with an overview of the basic properties of holomorphic mappings and holomorphic domains in Banach spaces The second section explores differentiable mappings differentiable forms and polynomially convex compact sets in which the results are applied to the study of Banach and Frchet algebras Subsequent sections examine plurisubharmonic functions and pseudoconvex domains in Banach spaces along with Riemann domains and envelopes of holomorphy In addition to its value as a text for advanced graduate students of mathematics this volume also functions as a reference for researchers and professionals Complex Analysis in Banach Spaces J. Mujica, 1985-11-01 Problems arising from the study of holomorphic continuation and holomorphic approximation have been central in the development of complex analysis in finitely many variables and constitute one of the most promising lines of research in

infinite dimensional complex analysis This book presents a unified view of these topics in both finite and infinite dimensions

Real Submanifolds in Complex Space and Their Mappings (PMS-47) M. Salah Baouendi, Peter Ebenfelt, Linda Preiss Rothschild, 2016-06-02 This book presents many of the main developments of the past two decades in the study of real submanifolds in complex space providing crucial background material for researchers and advanced graduate students The techniques in this area borrow from real and complex analysis and partial differential equations as well as from differential algebraic and analytical geometry In turn these latter areas have been enriched over the years by the study of problems in several complex variables addressed here The authors M Salah Baouendi Peter Ebenfelt and Linda Preiss Rothschild include extensive preliminary material to make the book accessible to nonspecialists One of the most important topics that the authors address here is the holomorphic extension of functions and mappings that satisfy the tangential Cauchy Riemann equations on real submanifolds They present the main results in this area with a novel and self contained approach The book also devotes considerable attention to the study of holomorphic mappings between real submanifolds and proves finite determination of such mappings by their jets under some optimal assumptions The authors also give a thorough comparison of the various nondegeneracy conditions for manifolds and mappings and present new geometric interpretations of these conditions Throughout the book Cauchy Riemann vector fields and their orbits play a central role and are presented in a setting that is both general and elementary

Isidro, 2019-12-09 This book is a systematic account of the impressive developments in the theory of symmetric manifolds achieved over the past 50 years It contains detailed and friendly but rigorous proofs of the key results in the theory Milestones are the study of the group of holomomorphic automorphisms of bounded domains in a complex Banach space Vigu and Upmeyer in the late 1970s Kaup s theorem on the equivalence of the categories of symmetric Banach manifolds and that of hermitian Jordan triple systems and the culminating point in the process the Riemann mapping theorem for complex Banach spaces Kaup 1982 This led to the introduction of wide classes of Banach spaces known as JB triples and JBW triples whose geometry has been thoroughly studied by several outstanding mathematicians in the late 1980s The book presents a good example of fruitful interaction between different branches of mathematics making it attractive for mathematicians interested in various fields such as algebra differential geometry and of course complex and functional analysis **Finite or Infinite Dimensional Complex Analysis and Applications** Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which

took place in Hanoi from August 8-12 2001 This conference was the 9th one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place at Pusan University in Korea in 1993 The preceding 8 conference was held in Shandong in China in August 2000 The 9th conference was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p -adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many complex variables 3 Clifford Analysis i.e. complex methods in higher dimensional real Euclidean spaces 4 Generalized analytic functions
