Storränk,2017-04-20 Ecosystem services in the Nordic countries entail a high potential with regard to regional growth and job creation The report *Unlocking regional potentials* describes recent policy actions taken by the Nordic countries regarding natural and cultural heritage as a valuable resource in sustainable regional development In addition the report introduces examples of European and Nordic research and development activities concerning valuation of natural and cultural heritage Nordic experiences underline the need to apply a broad view on regional development including the importance of natural and cultural heritage to human health well being social inclusion and local identity There is also a need to develop regional platforms for interaction between different interest groups and to carry out further analyses of regional assets with regard to natural and cultural heritage *An IUCN situation analysis of terrestrial and freshwater fauna in West and Central Africa*

,2015-06-01 This situation analysis was undertaken to inform responses to several resolutions made at the 5th World Conservation Congress in 2012 about the plight of large vertebrates in West and Central Africa It draws on a wide range of information to provide information on the status of these species important sites pressures legislation the effectiveness of protected areas and both community based incentives for conservation and institutional responses The overriding conclusion is of substantial wildlife declines and inadequate responses to either long standing pressures or rapidly escalating threats that have emerged in recent years *Regional Environmental Governance and Avenues for the Ecosystem Approach to management in the Baltic Sea Area* Sara Söderström,2017-01-17 This thesis explores the avenues for the ecosystem

approach to management in the Baltic Sea Region This region is one of the most contaminated water bodies in the world although the first Regional Seas Convention was created here and theregion has a long history of cooperation and environmental protection The current environmental governance arrangements are examined with specific focus on governance structures cross sectoral integration and ecological boundaries The ecosystem approach to management as both a tool and vision of holistic management of natural resources is traced through the evolution of environmental governance as well as its manifestation in contemporary environmental policies in the region It is found that the major EU directives as well as HELCOM polices promote the ecosystem approach and that its presence has increased in recent years it is now the major guiding principle in European marine governance However the governance structures impede implementation in different ways The environmental problem areas in the region all require different governance arrangements thus obstructing a holistic approach The environmental problems per se also affect each other necessitating far reaching sectoral integration and cross border cooperation which at present is the major obstacle regarding implementation The contemporary trends combining solid regionalisation through HELCOM with increased Europeanisation and macro regionalisation by different EU initiatives offer some promise but the cross sectoral impediments must be resolved if the ecosystem approach is to become

apactical approach and not just a policy principle
