Fundamentals of Experimental Design

Jerome L. Myers, 1979 This the third edition of Fundamentals of Experimental Design has five added chapters those on regression Chapters 12 14 and 15 multivariate analysis Chapter 18 and the matrix algebra appropriate to the level of presentation of this material Chapter 13 I have noted in the preface other additions in this third edition The added material should enhance the value of the book as a textbook and a reference Given these additions however alternative approaches in using the current edition as a textbook may merit consideration It may help to note that Chapters 16 and 17 analysis of covariance trend analysis do not depend on the material in Chapters 12 through 15 although the student should know something about simple linear regression to be able to understand fully the material in Chapters 16 and 17 In any event the instructor who wants to teach only the material in the first two editions can do so by dropping the added chapters 12 through 15 and 18 from the syllabus

The Chicago Guide to Writing about Multivariate Analysis, Second Edition Jane E. Miller, 2013-09-26 Many different people from social scientists to government agencies to business professionals depend on the results of multivariate models to inform their decisions Researchers use these advanced statistical techniques to analyze relationships among multiple variables such as how exercise and weight relate to the risk of heart disease or how unemployment and interest rates affect economic growth Yet despite the widespread need to plainly and effectively explain the results of multivariate analyses to varied audiences few are properly taught this critical skill The Chicago Guide to Writing about Multivariate Analysis is the book researchers turn to when looking for guidance on how to clearly present

statistical results and break through the jargon that often clouds writing about applications of statistical analysis This new edition features even more topics and real world examples making it the must have resource for anyone who needs to communicate complex research results For this second edition Jane E Miller includes four new chapters that cover writing about interactions writing about event history analysis writing about multilevel models and the Goldilocks principle for choosing the right size contrast for interpreting results for different variables In addition she has updated or added numerous examples while retaining her clear voice and focus on writers thinking critically about their intended audience and objective Online podcasts templates and an updated study guide will help readers apply skills from the book to their own projects and courses This continues to be the only book that brings together all of the steps involved in communicating findings based on multivariate analysis finding data creating variables estimating statistical models calculating overall effects organizing ideas designing tables and charts and writing prose in a single volume When aligned with Miller's twelve fundamental principles for quantitative writing this approach will empower readers whether students or experienced researchers to communicate their findings clearly and effectively Fundamentals of Experimental Design Jerome L.
