

MARK SCHEME for the May/June 2014 series

4024 MATHEMATICS (SYLLABUS D)

4024/21

Paper 2, maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

[The Proceedings from Halophiles 2013, the International Congress on Halophilic Microorganisms](#) R. Thane Papke, Aharon Oren, Antonio Ventosa, Jesse Dillon, 2015-07-08

The Halophiles 2013 meeting is a multidisciplinary international congress with a strong history of regular triennial meetings since 1978. Our mission is to bring researchers from a wide diversity of investigation interests: e.g. protein and species evolution, niche adaptation, ecology, taxonomy, genomics, metagenomics, horizontal gene transfer, gene regulation, DNA replication, repair and recombination, signal transduction, community assembly and species distribution, astrobiology, biotechnological applications, adaptation to radiation, desiccation, osmotic stress into a single forum for the integration and synthesis of ideas and data from all three domains of life and their viruses, yet from a single environment: salt concentrations greater than seawater. This cross-section of research informs our understanding of the microbiological world in many ways. The halophilic environment is extreme, especially above 10% NaCl, restricting life solely to microbes. The microorganisms that live there are adapted to extreme conditions and are notable for their ability to survive high doses of radiation and desiccation. Therefore, the hypersaline environment is a model system both the abiotic and biologic factors for insightful understanding regarding conditions and life in the absence of plant and animals: e.g. life on the early earth and other solar system bodies like Mars and Europa. Lower salinity conditions: e.g. 6-10% NaCl form luxuriant microbial mats considered modern analogues of fossilized stromatolites which are enormous microbially produced structures fashioned during the Precambrian and still seen today in places like Shark's Bay, Australia. Hypersaline systems are island-like habitats spread patchily across the earth's surface and similar to the Galapagos Islands represent unique systems excellent for studying the evolutionary pressures that shape microbial community assembly, adaptation and speciation. The unique adaptations to this extreme environment produce valuable proteins, enzymes and other molecules capable of remediating harsh human instigated environments and are useful for the production of biofuels, vitamins and retinal implants, for example. This research topic is intended to capture the breadth and depth of these topics.
