Harmonization of Seismic Hazard in Vrancea Zone Anton Zaicenco, Iolanda Craifaleanu, Ivanka Paskaleva, 2008-11-14 The NATO Science for Peace Project SfP 980468 Harmonization of Seismic Hazard and Risk Reduction in Countries Influenced by Vrancea Earthquakes was an ambitious attempt to harmonize the seismic hazard assessment in Bulgaria Moldova and Romania and provide the guidelines for seismic risk reduction in the target countries Related to the study of intermediate depth Vrancea earthquakes it became operational in 2005 The project co coordinators were as follows Prof G ney zcebe Ankara Turkey Dr Anton Zaicenco Chisinau Moldova Dr Iolanda Craifaleanu Bucharest Romania Prof Ivanka Paskaleva Sofia Bulgaria The project has brought together leading research personalities in the area of earthquake engineering seismology and earth physics from several countries for brainstorming sessions informal discussions and exchanges of ideas One of its key components was an upgrade of the strong motion seismic networks of the countries participants which created a foundation for a long term collaboration A number of papers have been published as a result of the work conducted under this project The present book contains the Proceedings of the Closing Workshop for Project SfP 980468 which was organized in Chisinau Moldova on May 20 2008 From hazard analyses to protection of the historical buildings from study of the dynamic properties of the soft soils to paleoseismology there are few areas of interest that remain untouched Research from the NATO members and partner countries in South Eastern Europe that forms the components of NATO Project SfP 980468 has made solid contributions to the Workshop theme **Multi-hazard Approaches to Civil Infrastructure Engineering** Paolo Gardoni, James M. LaFave, 2016-06-22 This collection focuses on the development of novel approaches to address one of the most pressing challenges of civil engineering namely the mitigation of natural hazards Numerous engineering books to date have focused on and illustrate considerable progress toward mitigation of

individual hazards earthquakes wind and so forth The current volume addresses concerns related to overall safety sustainability and resilience of the built environment when subject to multiple hazards natural disaster events that are concurrent and either correlated e g wind and surge uncorrelated e g earthquake and flood cascading e g fire following earthquake or uncorrelated and occurring at different times e g wind and earthquake The authors examine a range of specific topics including methodologies for vulnerability assessment of structures new techniques to reduce the system demands through control systems instrumentation monitoring and condition assessment of structures and foundations new techniques for repairing structures that have suffered damage during past events or for structures that have been found in need of strengthening development of new design provisions that consider multiple hazards as well as questions from law and the humanities relevant to the management of natural and human made hazards

The United States will certainly be subject to damaging earthquakes in the future Some of these earthquakes will occur in highly populated and vulnerable areas Coping with moderate earthquakes is not a reliable indicator of preparedness for a major earthquake in a populated area The recent disastrous magnitude 9 earthquake that struck northern Japan demonstrates the threat that earthquakes pose Moreover the cascading nature of impacts the earthquake causing a tsunami cutting electrical power supplies and stopping the pumps needed to cool nuclear reactors demonstrates the potential complexity of an earthquake disaster Such compound disasters can strike any earthquake prone populated area National Earthquake Resilience presents a roadmap for increasing our national resilience to earthquakes The National Earthquake Hazards Reduction Program NEHRP is the multi agency program mandated by Congress to undertake activities to reduce the effects of future earthquakes in the United States The National Institute of Standards and Technology NIST the lead NEHRP agency commissioned the National Research Council NRC to develop a roadmap for earthquake hazard and risk reduction in the United States that would be based on the goals and objectives for achieving national earthquake resilience described in the 2008 NEHRP Strategic Plan National Earthquake Resilience does this by assessing the activities and costs that would be required for the nation to achieve earthquake resilience in 20 years National Earthquake Resilience interprets resilience broadly to incorporate engineering science physical social economic behavioral and institutional governing dimensions Resilience encompasses both pre disaster preparedness activities and post disaster response In combination these will enhance the robustness of communities in all earthquake vulnerable regions of our nation so that they can function adequately following damaging earthquakes While National Earthquake Resilience is written primarily for the NEHRP it also speaks to a broader audience of policy makers earth scientists and emergency managers

including civil defense slow push or pull methods kinetic impactors and nuclear explosions It also asserts that responding effectively to hazards posed by NEOs requires national and international cooperation Defending Planet Earth Near Earth Object Surveys and Hazard Mitigation Strategies is a useful guide for scientists astronomers policy makers and engineers
