Formal Methods for Components and Objects Frank S. de Boer, Marcello Bonsangue, Susanne Graf, Willem-Paul de Roever, 2003-12-01 Large and complex software systems provide the necessary infrastructure in all industries today In order to construct such large

systems in a systematic manner the focus in the development methodologies has switched in the last two decades from functional issues to structural issues both data and functions are encapsulated into software units that are integrated into large systems by means of various techniques supporting reusability and modifiability This encapsulation principle is essential to both the object oriented and the more recent component based software engineering paradigms Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to large systems requires the further development of specification and verification techniques supporting the concepts of reusability and modifiability In order to bring together researchers and practitioners in the areas of software engineering and formal methods we organized the 1st International Symposium on Formal Methods for Components and Objects FMCO in Leiden The Netherlands November 5-8 2002 The program consisted of invited tutorials and more technical presentations given by leading experts in the fields of Theoretical Computer Science and Software Engineering The symposium was attended by more than 100 people This volume contains the contributions of the invited speakers to FMCO 2002 We believe that the presented material provides a unique combination of ideas on software engineering and formal methods which we hope will be an inspiration for those aiming at further bridging the gap between the theory and practice of software engineering
