Approaches In Integrative Bioinformatics Towards The Virtual Cell:

Approaches in Integrative Bioinformatics Ming Chen, Ralf Hofestädt, 2014-01-18 Approaches in Integrative Bioinformatics provides a basic introduction to biological information systems as well as guidance for the computational analysis of systems biology. This book also covers a range of issues and methods that reveal the multitude of omics data integration types and the relevance that integrative bioinformatics has today. Topics include biological data integration and manipulation, modeling and simulation of metabolic networks, transcriptomics and phenomics, and virtual cell approaches, as well as a number of applications of network biology. It helps to illustrate the value of integrative bioinformatics approaches to the life sciences. This book is intended for researchers and graduate students in the field of Bioinformatics. Professor Ming Chen is the Director of the Bioinformatics Laboratory at the College of Life Sciences, Zhejiang University, Hangzhou, China. Professor Ralf Hofestädt is the Chair of the Department of Bioinformatics and Medical Informatics, Bielefeld University, Germany.

Immersive Analytics Kim Marriott, Falk Schreiber, Tim Dwyer, Karsten Klein, Nathalie Henry Riche, Takayuki Itoh, Wolfgang Stuerzlinger, Bruce H. Thomas, 2018-10-15 Immersive Analytics is a new research initiative that aims to remove barriers between people, their data, and the tools they use for analysis and decision making. Here, the aims of immersive analytics research are clarified, its opportunities and historical context, as well as providing a broad research agenda for the field. In addition, it is reviewed how the term immersion has been used to refer to both technological and psychological immersion, both of which are central to immersive analytics research.

Multivariate Network Visualization Andreas Kerren, Helen Purchase, Matthew O. Ward, 2014-04-15 This book is the outcome of the Dagstuhl Seminar 13201 on Information Visualization Towards Multivariate Network Visualization, held in Dagstuhl Castle, Germany, in May 2013. The goal of this Dagstuhl Seminar was to bring together theoreticians and practitioners from Information Visualization, HCI, and Graph Drawing, with a special focus on multivariate network visualization, i.e., on graphs where the nodes and/or edges have additional multidimensional attributes. The integration of multivariate data into complex networks and their visual analysis is one of the big challenges, not only in visualization but also in many application areas. Thus, in order to support discussions related to the visualization of real-world data, also invited researchers from selected application areas, especially bioinformatics, social sciences, and software engineering. The unique Dagstuhl climate ensured an open and undisturbed atmosphere to discuss the state of the art, new directions, and open challenges of multivariate network visualization.
