focuses on recent biochemical and biophysical advances and the molecular biological techniques that have made them

possible In ten chapters that are self contained but that build upon information presented earlier the book starts with a

reductionist biophysical description of the photosynthetic reactions It then moves through biochemical and molecular

biological patterns in aquatic photoautotrophs physiological and ecological principles and global biogeochemical cycles The

book considers applications to ecology and refers to historical developments It can be used as a primary text in a lecture

course or as a supplemental text in a survey course such as biological oceanography limnology or biogeochemistry

*Arctic Sea Ice Ecology* Lars Chresten

Lund-Hansen,Dorte Haubjerg Søgaard,Brian Keith Sorrell,Rolf Gradinger,Klaus Martin Meiners,2020-08-07 The book on sea ice ecology is the ecology of sea ice algae and other microorganism as bacteria meiofauna and viruses residing inside or at the bottom of the sea ice called the sympagic biota Organisms as seals fish birds and Polar bears relies on sea ice but are not part of this biota A distinct feature of this ecosystem is the disappearance melt every summer and re establishing in autumn and winter The book is organized seasonally describing the physical optical biological and geochemical conditions typical of the seasons autumn winter and spring These are exemplified with case studies based on author s fieldwork in Greenland the Arctic Ocean and Antarctica but focused on Arctic conditions The sea ice ecosystem is described in the context of climate change interests and effects of a decreasing summer ice extent in the Arctic Ocean The book contains an up to date description of most relevant methods and techniques applied in sea ice ecology research This book will appeal to university students at Masters or PhD levels reading biology geosciences and chemistry A History of Radioecology Patrick C.

Kangas,2022-12-26 This book presents a history of radioecology from World War II through to the critical years of the Cold War finishing with a discussion of recent developments and future implications for the field Drawing on a vast array of primary sources the book reviews synthesizes and discusses the implications of the ecological research supported by the Atomic Energy Commission AEC of the United States government from World War II to the early 1970s This was a critical period in the history of ecology characterized by a transition from the older largely descriptive studies of communities of plants and animals to the modern form of the science involving functional studies of energy flow and mineral cycling in ecosystems This transition was in large part due to the development of radioecology which was a by product of the Cold War and the need to understand and predict the consequences of a nuclear war that was planned but has never occurred The book draws on important case studies such as the Pacific Proving Grounds the Nevada Test Site El Verde in Puerto Rico the Brookhaven National Laboratory and recent events such as the nuclear disasters at Chernobyl and Fukushima By revisiting studies and archived information from the Cold War era this book offers lessons from the history of radioecology to provide background and perspective for understanding possible present day impacts from issues of radiation risks associated with nuclear power generation and waste disposal Post Cold War developments in radioecology will be also reviewed and contrasted with the AEC supported ecology research for further perspectives This book will be of great interest to students and scholars of radioecology environmental pollution environmental technology bioscience and environmental history
