Soares,2015-04-17 What can a college

admissions officer safely predict about the future of a 17 year old Are the best and the brightest students the ones who can check off the most correct boxes on a multiple choice exam Or are there better ways of measuring ability and promise In this penetrating and revealing look at high stakes standardized admissions tests Joseph Soares demonstrates the far reaching and mostly negative impact of the tests on American life and calls for nothing less than a national policy change SAT Wars

presents a roadmap for rethinking college admissions that moves us past the statistically weak and socially divisive SAT ACT. The author advocates for evaluation tools with a greater focus on what youth actually accomplish in high school as a more reliable indicator of qualities that really matter in one's life and to one's ability to contribute to society. This up-to-date book features contributions by well-known experts including a piece from Daniel Golden who won a Pulitzer Prize for his reporting in the Wall Street Journal on admissions and a chapter on alternative tests from Robert Sternberg who is the world's most cited living authority on educational research. As we continue to debate the use and misuse of standardized testing, SAT Wars will be important reading for a wide audience including college administrators and faculty, high school guidance counselors, education journalists and parents.

Mind Expanding: Teaching for Thinking and Creativity in Primary Education Rupert Wegerif, 2010-08-16. An essential addition. Wegerif zooms in on the most important ingredient of all in a learning to learn classroom culture: the kinds of talk that are allowed and encouraged and brings together both scholarly and practical approaches in a highly fruitful and accessible way. Guy Claxton, author of *Building Learning Power: What's the Point of School and New Kinds of Smart*. This is a thought-provoking and readable book which makes a very good case for the importance of teaching thinking skills and encouraging creativity through dialogue. Professor Neil Mercer, University of Cambridge, UK, author of *Words and Minds and Dialogue and Development*. There is growing interest in developing flexible thinking and learning skills in the primary classroom but there has been little agreement as to exactly what these skills are and how best to teach for them. This innovative book responds to that challenge with a coherent account of what thinking and creativity are and how they can be taught. Taking a dialogic approach, it shows how engaging children in real dialogue is possible in every area of the curriculum and how this can lead to more reflective, considerate and creative children who are able to think for themselves and to learn creatively. Wegerif explores the success of approaches such as Philosophy for Children, Thinking Together, Dialogic Teaching and Building Learning Power. Using illustrations and activities, he explains how teaching and learning across the primary curriculum can be transformed. This book is important reading for all primary teachers and trainees who are looking for practical ideas for teaching thinking. It will also be valuable for anyone who wants to understand education and think more about what is most important in education.

Dialogic Education and Technology Rupert Wegerif, 2007-10-13. Dialogic Education and Technology is about using new technology to draw people into the kind of dialogues which take them beyond themselves into learning, thinking and creativity. The program of research reported in this book reveals key characteristics of learning dialogues and demonstrates ways in which computers and networks can deepen, enrich and expand such dialogues. A dialogic perspective is developed drawing upon recent work in communications theory, psychology, computer science and philosophy. This perspective foregrounds the creative space opened up by authentic dialogues. Whereas studies of computer-supported collaborative learning have tended to see dialogue as a means to the end of knowledge construction, the dialogic perspective taken by this book sees dialogue as an end in itself, in fact moving

learners into the space of dialogue is described as the core aim of education. The central argument of the book is that there is a convergence between this dialogic perspective in education and the affordances of new information and communications technology. A genuinely dialogic perspective is relatively new to the field of educational technology and there is a considerable amount of interest in this topic amongst researchers who wish to see what extra insights if any a dialogical approach can offer them. This is an exciting book that synthesizes, clarifies and extends mounting discussions of dialogical thinking related to computer supported education. It is not only a delightful personal statement but provokes thought on central issues of CSCL and enters into challenging dialog with the relevant alternative approaches. As a result of reading this book I am convinced that we urgently need to open new online spaces for people to understandingly interact with different perspectives and creatively generate new insight and respect for difference. Gerry Stahl, Executive Editor of the International Journal of Computer Supported Collaborative Learning. This book offers a set of lenses which give deep insight into education and the use of technologies for learning. The moves between empirical studies, theoretical reflections and discussion of the design of learning environments make the book very thought provoking. Ideas are not just treated as ideas but they become transformed into principles for design. Wegerif is convincing that the use of technology for the creation, maintaining and development of dialogical spaces has the potential for transforming and expanding educational experiences in a way which offers a needed vision of learning for the future. Sten Ludvigsen, Director of the InterMedia Centre for design, communication and learning, University of Oslo.
