

indicated in the Maintenance Schedule folder. Add GM Steering Fluid (GM Part Number 1050017 or equivalent) as follows:

If the fluid is warmed up (about 86°C or 185°F — not to the point of boiling), the fluid level should be between the "HOT" and "COLD" marks on the filler cap indicator.

If the fluid is cold (about 21°C or 70°F), the fluid level should be between the "ADD" and "COLD" marks.

does not need periodic changing.

### Suspension and Steering Linkage

Lubricate at the interval shown in the Maintenance Schedule with water resistant EP Chassis Lubricant which meets specification 6031M.

Ball joints should not be lubricated unless their temperature is 100°F or higher. During cold weather, they should be allowed to warm up as necessary before being lubricated or damage to the ball joint seal.

## FREEDOM BATTERY

### Working Near Battery

**CAUTION:** Follow the precautions listed in the "Jump Starting" section (see "Emergency Starting Your Vehicle Due To A Discharged Battery" in Section II) when working on or near the battery. Personal injury (particularly to eyes) or property damage may result from battery explosion, battery acid, or electrical (short circuit) burns.

Your new vehicle has a Delco-FREEDOM battery. It needs no periodic maintenance. Its top is permanently sealed (except for two small vent holes) and has no filler caps. You will never have to add water.

The hydrometer (test indicator) in the top of the battery provides information for testing purposes only.

If the vehicle is not going to be driven for 30 days or longer, disconnect the cable from the "-" (black) negative terminal of the battery to prevent discharge.

For full power needs at replacement time, a Delco battery with the same catalog number as shown on the original battery's label is recommended.

### CIRCUIT BREAKERS

The headlight wiring is protected by a circuit breaker in the light switch. An electrical overload will cause the lights to go on and off, or in some cases to remain off. If this happens, have your headlight wiring checked right away.

The windshield wiper motor is protected by a circuit breaker in addition to a fuse. If the motor overheats, due to overloading caused by heavy snow, etc., the wiper will remain stopped until the motor cools. Be sure to have the cause of the overloading corrected.
