Advanced Computer Graphics Robert Douglas Parslow, Richard Elliot Green, 2012-12-06 Computer graphics is no longer merely a technique of promise The case studies in this book prove that it is a technique which has already identified itself with progress in an astonishingly wide range of applications to the extent that it has been necessary to group many chapters into sections dealing with specific categories such as the design of electrical circuits civil engineering architecture nuclear and space science and text editing In the last couple of years computer graphics has blossomed out from the stage in which it was confined almost exclusively to the large scale industries of aircraft and automobile engineering It has also developed additional advantages more than the simple idea of doing the same thing more quickly Now the technique offers entirely new ways of doing old things with consequent greater efficiency and accuracy and it also brings a way of doing new things which were previously not possible In the introduction to their paper in Part 12 Armit and Forrest state We do not discuss those systems which are merely computer versions of existing design methods but rather those systems which make use of techniques for design which are beyond the possibilities of conventional drafting Similarly Ranaweera and Leckie end their paper in Part 4 with the comment Thus the man and the machine can work as a team to arrive at a solution better than that which can be arrived at by either one alone

Interactive Graphics in CAD Y. Gardan, Lucas, 2012-12-06 In a society in which the use of information technology is becoming commonplace it is natural that pictures and images produced by electronic means should be increasing in importance as a means of communication Computer graphics have only recently come to the attention of the general public mainly through animated drawings advertisements and video games The quality of the pictures is often such that unless informed of the fact people are unaware that they are created with the help of computers Some simulations those developed in connection with the space shuttle for example represent a great and rapid progress In industry computer graphic techniques are used not only for the presentation of business data but also in design and manufacture processes Such computer assisted systems are collectively represented by the acronym CAX In CAD CAM computer assisted design manufacture interactive graphic techniques have attained considerable importance In CAD CAM systems a dialogue can be established between the user and the machine using a variety of easy to operate communication devices Due to the recent developments in hardware and software for modelling visual display etc a designer is now able to make decisions based on the information presented plans perspective drawings graphics etc with the help of interactive graphic techniques These constitute the most visible and perhaps most spectacular aspect of CAD CAM systems From Object Modelling to Advanced Visual Communication Sabine Coquillart, Wolfgang Straßer, Peter Stucki, 2012-12-06 This book is a collection of the best papers originally presented as state of the art reports or tutorials at the Eurographics 91 conference in Vienna A choice has been made giving priority to timeless information Another goal was to cover all aspects of computer graphics except hardware as completely as possible from modelling to advanced visualization and communication
