Advanced Mathematical Methods for Economic Efficiency Analysis Pedro Macedo, Victor Moutinho, Mara Madaleno, 2023-06-21 Economic efficiency analysis has received considerable worldwide attention in the last few decades with Stochastic Frontier Analysis SFA and Data Envelopment Analysis DEA establishing themselves as the two dominant approaches in the literature This book by combining cutting edge theoretical research on DEA and SFA with attractive real world applications offers a valuable asset for professors students researchers and professionals working in all branches of economic efficiency analysis as well as those concerned with the corresponding economic policies The book is divided into three parts the first of which is devoted to basic concepts making the content self contained The second is devoted to DEA and the third to SFA The topics covered in Part 2 range from stochastic DEA to multidirectional dynamic inefficiency analysis including directional distance functions the elimination and choice translating algorithm benefit of the doubt composite indicators and internal benchmarking for efficiency evaluations Part 3 also includes exciting and cutting edge theoretical research on e g robustness nonparametric stochastic frontier models hierarchical panel data models and estimation methods like corrected ordinary least squares and maximum entropy

Advanced Mathematical Methods Adam Ostaszewski, 1990 This text is a self contained second course on mathematical methods dealing with topics in linear algebra and multivariate calculus that can be applied to statistics

Advanced Math for Economics Peter Lambert, 1985 This book contains a compact accessible treatment of the main mathematical topics encountered in economics at an advanced level moving from basic material into the twin areas of static and dynamic optimization Nearly half of the book is devoted to a survey of univariate calculus matrix algebra and multivariate calculus This fundamental material is made vigorous by the inclusion of a variety of applications The later chapters focus on the Lagrange multiplier technique when it will work why it works and what economic insights it yields The properties of maximum value functions and duality are explored as are the Hamiltonian conditions for dynamic problems in the optimal control format Dynamic programming and the calculus of variations are also covered Much of the discussion proceeds at a heuristic level and by worked example but the theorems and proofs required by the most analytical user are also to be found The underlying message is that the language of mathematics can be productive giving expression to the ideas and facilitating approaches from which insights flow that may be hard to come by in other ways The book will be particularly useful for final year undergraduates doing mathematics for economists

courses and postgraduate students Mathematical Economics Fouad Sabry,2023-12-18 What is Mathematical Economics Within the field of economics mathematical economics refers to the utilization of mathematical techniques for the purpose of representing ideas and analyzing situations It is common for these applied methods to go beyond simple geometry Some examples of these approaches include differential and integral calculus difference and differential equations matrix algebra mathematical programming and other computer methods The individuals who advocate for this method assert that it makes it possible to formulate theoretical linkages in a manner that is rigorous general and straightforward How you will benefit I Insights and validations about the following topics Chapter 1 Mathematical economics Chapter 2 Navier Stokes equations Chapter 3 Riemann curvature tensor Chapter 4 Fractional calculus Chapter 5 Step response Chapter 6 Drawdown economics Chapter 7 KMS state Chapter 8 Ramsey Cass Koopmans model Chapter 9 Lattice Boltzmann methods Chapter 10 Green s function many body theory Chapter 11 Stokes s law of sound attenuation Chapter 12 Hasse Davenport relation Chapter 13 Discrete Morse theory Chapter 14 Zonal spherical function Chapter 15 Commutation theorem for traces Chapter 16 Critical taper Chapter 17 Moving load Chapter 18 M D 1 queue Chapter 19 Katugampola fractional operators Chapter 20 Functional differential equation Chapter 21 Recharge oscillator II Answering the public top questions about mathematical economics III Real world examples for the usage of mathematical economics in many fields IV Rich glossary featuring over 1200 terms to unlock a comprehensive understanding of mathematical economics eBook only Who will benefit Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of mathematical economics Advanced Mathematical Methods Francesco Mainardi,Andrea Giusti,2020-02-05 The many technical and computational problems that appear to be constantly emerging in various branches of physics and engineering beg for a more detailed understanding of the fundamental mathematics that serves as the cornerstone of our way of understanding natural phenomena The purpose of this Special Issue was to establish a brief collection of carefully selected articles authored by promising young scientists and the world s leading experts in pure and applied mathematics highlighting the state of the art of the various research lines focusing on the study of analytical and numerical mathematical methods for pure and applied sciences *Mathematical Economics* Kelvin Lancaster,2012-10-10 Graduate level text provides complete and rigorous expositions of economic models analyzed primarily from the point of view of their mathematical properties followed by relevant mathematical reviews Part I covers optimizing theory Parts II and III survey static and dynamic economic models and Part IV contains the mathematical reviews which range from linear algebra to point to set mappings

Advanced Mathematical Methods In Environmental And Resource Economics Anastasios Xepapadeas,2022-09-20 The most interesting issues in environmental and resource economics have an explicit temporal dimension since variables of interest such as pollutants greenhouse gases biomass of biological resources or the stocks of fossil fuels accumulate in the ambient environment or are depleted through human actions and natural processes The purpose of these lectures is to

present the mathematical tools for analyzing environmental and resource management issues in a dynamic set up The lectures include a brief description of differential equations and then move on to describe methods of optimal control dynamic programming and differential games The final chapters cover two novel topics 1 environmental issues characterized by deep uncertainty and aversion to ambiguity using robust control methods and formulations of precautionary policies and 2 the study of pollution resource management in space and time when the environmental variables evolve in time and diffuse in space The lectures are a valuable tool for advanced graduate students in environmental and resource economics who are studying dynamic problems Mathematics of Economics and Business Frank Werner,Yuri N.
