Advanced Separation Techniques For Polyolefins By Harald Pasch Published October 2014:

Advanced Separation Techniques for Polyolefins Harald Pasch, Muhammad Imran Malik, 2014-08-27 This Springer Laboratory volume introduces the reader to advanced techniques for the separation and fractionation of polyolefins. It includes detailed information on experimental protocols and procedures addressing the experimental background of different polyolefin fractionation techniques in great detail. The book summarizes important applications in all major fractionation methods with emphasis on multidimensional analytical approaches. It comprises the most powerful modern techniques such as high temperature size exclusion chromatography HT SEC for molar mass analysis, temperature rising elution fractionation TREF and crystallization analysis fractionation CRYSTAF for the analysis of chemical composition and branching, high temperature two dimensional liquid chromatography HT 2D LC, solvent and temperature gradient interaction chromatography SGIC and TGIC and crystallization elution fractionation CEF. Beginners as well as experienced chromatographers will benefit from this concise introduction to a great variety in instrumentation, separation procedures and applications. With detailed descriptions of experimental approaches for the analysis of complex polyolefins, the readers are offered a toolbox to solve simple as well as sophisticated separation tasks. The book starts with an introduction into the molecular complexity of polyolefins, the most widely used synthetic polymers with rapidly growing production capacities. It systematically discusses crystallization based fractionation techniques including TREF, CRYSTAF and CEF and column chromatographic techniques for molar mass, chemical composition and microstructure, as well as the combination of different fractionations in multidimensional experimental setups. This book also includes basic information on the application of high temperature field flow fractionation.

Thermal Field-flow Fractionation of Polymers Guillaume Greyling, Harald Pasch, 2019 This book introduces the reader to thermal field flow fractionation and discusses its advantages over the fundamental problems associated with traditional column based analytical techniques commonly used to characterize polymers and macromolecules. The authors discuss the theoretical background, equipment, experimental procedures as well as the recent advances and applications of thermal field flow fractionation. Complete with several practical examples and troubleshooting guidelines, the book is written for beginners and experienced separation scientists alike and will enable its readers to optimize their experimental conditions for their specific separation needs and problems.

[Separation Methods in Organic Chemistry and Biochemistry](#) Frank J. Wolf, 2013-10-22 *Separation Methods in Organic Chemistry and Biochemistry* aims to provide perspectives for the commonly used separations methods and to discuss indications for their use. The book discusses the determination of molecular properties useful in separation based on micro test methods: paper chromatography, thin layer chromatography and electrophoresis. The text then describes the theoretical principles of group separation procedures: liquid liquid partition, ion exchange selectivity, gel permeation and adsorption. Methods of influencing the selectivity coefficients, the basic theory of fractionation methods and the principles of application are also encompassed.

Biochemists and chemists will find the book useful
