New Insights into the Theory of Giffen Goods Wim Heijman, Pierre Mouche, 2011-10-12 One might expect that after their identification in the 19th century all aspects of Giffen goods would have been studied by now This appears not to be the case This book contains the latest insights into the theory of Giffen goods In the past surprisingly few goods could be categorized as Giffen This may be because of a lack of understanding of the character of these goods Therefore the theories explained in this book may also produce a solid basis for further empirical research in the field Experts throughout the world have contributed to this book which predominantly pursues a mathematically rigorous approach It may be used by researchers in the field of fundamental economics and in graduate level courses in advanced microeconomics

Advanced Microeconomic Theory Geoffrey Alexander Jehle, Philip J. Reny, 1998 Provides extra instruction in the mathematics of modern microeconomics enabling students to gain a sophisticated command of the material Content includes chapters on information economics integrated with material on game theory and classical theory The text emphasizes the role of information in market performance with many examples and exercises

Network Economics and the Allocation of Savings Philipp Servatius, 2011-10-20 This book provides a game theoretic model of interaction among VoIP telecommunications providers regarding their willingness to enter peering agreements with one another The author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees At the same time termination fees can have a countering and dominant effect resulting in an environment in which VoIP firms decide against peering Various scenarios of peering and rules for allocation of the savings are considered The first part covers the relevant aspects of game theory and network theory trying to give an overview of the concepts required in the subsequent application The second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between VoIP firms The conditions under which firms are willing to peer are then described considering the possible influence of a regulatory body

Mathematical Foundations for Signal Processing, Communications, and Networking Erchin Serpedin, Thomas Chen, Dinesh Rajan, 2017-12-04 Mathematical Foundations for Signal Processing Communications and Networking describes mathematical concepts and results important in the design analysis and optimization of signal processing algorithms modern communication systems and networks Helping readers master key techniques and comprehend the current research literature the book offers a comprehensive overview of methods and

Lindauer,2023-09-21 Political philosophy asks questions of great importance to our lives both as individuals and members of political communities What is justice What does the state owe to its citizens Under which conditions are different forms of government likely to be stable The relevance of empirical research to such questions however has been largely underexplored Introducing experimental political philosophy as a burgeoning field of inquiry this volume brings together leading scholars using empirical methods to shed light on questions of justice and politics and encourages them to reflect on the relationship of their methodologies to less empirically focused approaches Chapters cover traditional topics including distributive justice egalitarianism property rights and healthcare justice as well as outlining new directions and applications such as the problem of misogynistic extremist movements the public justification of immigration enforcement and the relationship between gender norms and support for care labor organizing The result is a unique collection that paves the way

for further debates in the field and meaningful reflection on what it means for political philosophy to be empirically informed

The New Drug Reimbursement Game Brita A.K. Pekarsky, 2014-10-09 This comprehensive text presents a rigorous framework from within which regulators can respond strategically to the claim by the pharmaceutical industry that lower drug prices today lead to a loss for the population's future health due to less innovation. It starts with a critical review of the empirical evidence of the return to consumers on their ongoing investment into high drug prices in order to increase future innovation. The implicit critical and unrealistic assumption inherent in these studies is identified namely that the health budget can be expanded to purchase drugs at higher prices without an opportunity cost for example the foregone benefits of alternative investments in health care infrastructure. Price effectiveness analysis (PEA) is introduced. PEA informs the question of how the innovative surplus from the new drug should be allocated between the manufacturer and the consumer so as to optimise society's welfare. The method allows the decisions by the regulator and the firm to be analysed jointly by specifying the firm's production and revenue functions in terms of the clinical innovation of a new drug. The incremental effect used in the summary metric of cost effectiveness analysis. An economic value of innovation that takes into account opportunity cost under conditions of economic efficiency in the health system is proposed: the health shadow price. The limitations of the non-strategic methods that currently inform the highly contested new drug subsidy game are presented and the relative strengths of PEA are demonstrated. Health technology assessment quantifies both the clinical innovation of a new drug and its financial impact on the health system. Cost effectiveness analysis tests the relationship between the incremental cost and incremental effect of a new drug for target patients at a given price. PEA tests the relationship between the price of a new drug and the health of the whole population now and into the future. It achieves this by taking into account current inefficiency in both resource allocation and the displacement process and the relationship between price and future innovation.

Mathematics for economists Malcolm Pemberton, Nicholas Rau, 2023-11-10 This book is a self-contained treatment of all the mathematics needed by undergraduate and masters level students of economics, econometrics and finance. Building up gently from a very low level, the authors provide a clear systematic coverage of calculus and matrix algebra. The second half of the book gives a thorough account of probability, dynamics and static and dynamic optimisation. The last four chapters are an accessible introduction to the rigorous mathematical analysis used in graduate level economics. The emphasis throughout is on intuitive argument and problem solving. All methods are illustrated by examples, exercises and problems selected from central areas of modern economic analysis. The book's careful arrangement in short chapters enables it to be used in a variety of course formats for students with or without prior knowledge of calculus for reference and for self-study.
