**The Progressive Fish Culturist**, 1997      Landscape Permeability for Large Carnivores in Washington

Peter H. Singleton, 2002 We conducted a regional scale evaluation of landscape permeability for large carnivores in Washington and adjacent portions of British Columbia and Idaho We developed geographic information system based landscape permeability models for wolves *Canis lupus* wolverine *Gulo gulo* lynx *Lynx canadensis* and grizzly bear *Ursus arctos* We also developed a general large carnivore model to provide a single generalization of the predominant landscape patterns for the four focal species The models evaluated land cover type road density human population density elevation and slope to provide an estimate of landscape permeability We identified five concentrations of large carnivore habitat between which we evaluated landscape permeability The habitat concentration areas were the southern Cascade Range the north central Cascade Range the Coast Range the Kettle Monashee Ranges and the Selkirk Columbia Mountains We evaluated landscape permeability in fracture zones between these areas including the I 90 Snoqualmie Pass area the Fraser Coquihalla area the Okanogan Valley and the upper Columbia and Pend Oreille River valleys We identified the portions of the Washington state highway system that passed through habitat linkages between the habitat concentration areas and areas accessible to the focal species This analysis provides a consistent measure of estimated landscape permeability across the analysis area which can be used to develop conservation strategies contribute to future field survey efforts and help identify management priorities for the focal species
