Information and communication technologies for small-scale fisheries (ICT4SSF) - A handbook for fisheries stakeholders Tilley, A. and Roscher, M. (Ed.), The aim of this report is to present evidence towards how Information and Communication Technologies for Small scale Fisheries ICT4SSF might enable and support the implementation of the FAO's Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication SSF Guidelines We present case studies of ICT4SSF initiatives in different use areas to identify key themes and reflect on successes and failures

There are very few baselines against which to compare fisher wellbeing and access before and after ICT initiatives and this gap is an important finding in this report. Thus far success has only been assessed qualitatively and relatively in terms of uptake, sustainability and local legitimacy. Still, some ICT4SSF initiatives presented in this document are closely aligned with the Principles for Digital Development and the objectives of the SSF Guidelines. These initiatives highlighted that when ICTs are locally led or developed or co-designed with end users and marginalised groups or strengthened already existing networks and technologies, the potential for positive impact is much higher. However, there is much less evidence of proactive confrontation of inequality through data ownership. Further, there are very few examples of developing mechanisms for fishers and fish workers to hold access or own their data or legal mechanisms to recognise their ownership or protect them against misuse or manipulation.

European and International Experiences of Strategic Environmental Assessment Barry Sadler, Jiří Dušík, 2016-03-17. This book brings together the latest thinking in Strategic Environmental Assessment (SEA) and considers the key question of whether the processes are having a positive impact on strategic decision making both in Europe and worldwide. As governments move to develop green agendas, the book explores the challenges of working within national systems as well as the strengths and weaknesses of sector-specific SEA. The importance of stakeholder engagement is considered, as is the question of how to turn NIMBYs into WIMBYs, that is, creating positive reasons to encourage development and allow local stakeholders to profit. In assessing ways in which the practice of SEA can provide a new agenda for the 21st Century, the chapters explore current and emerging approaches, procedures and methods, along with ways in which SEA can be linked with other planning tools. The role of research and academia is considered, and the book looks beyond the current status of SEA to address the question of how practitioners can capitalise on the potential of SEA to become integrated into high-level policy as a key element of climate change mitigation strategies. Each chapter is written by internationally renowned authors and based on many years of experience in the field. The book will be essential reading for forward-thinking practitioners and students of SEA.

The Common Fisheries Policy Ernesto Penas Lado, 2016-04-18. Dieses ausführliche und umfassende Fachbuch von Ernesto Penas Lado als Generaldirektion Maritime Angelegenheiten und Fischerei bei der Europäischen Kommission erläutert umfangreich die Gemeinsame Fischereipolitik (GFP), politische Grundsätze, die für Wissenschaftler und Experten im Fischereiwesen überaus wichtig sind. Silwood Circle, The: A History Of Ecology And The Making Of Scientific Careers In Late Twentieth-century Britain Hannah Gay, 2013-04-12 This is an original and wide ranging account of the careers of a close knit group of highly influential ecologists working in Britain from the late 1960s onwards The book can also be read as a history of some recent developments in ecology One of the group Robert May is a past president of the Royal Society and the author of what many see as the most important treatise in theoretical ecology of the later twentieth century That the group flourished was due not only to May's intellectual leadership but also to the guiding hand of T R E Southwood Southwood ended his career as Linacre Professor of Zoology at the University of Oxford where he also served a term as Vice Chancellor Earlier as a professor and director of the Silwood Park campus of Imperial College London he brought the group together Since it began to coalesce at Silwood it has been named here the Silwood Circle Southwood promoted the interests of its members with the larger aim of raising the profile of ecological and environmental science in Britain Given public anxiety over the environment and the loss of ecosystems his actions were well timed Ecology which had been on the scientific margins in the first half of the twentieth century came to be viewed as a science central to modern existence The book illustrates its importance to many areas Members of the Silwood Circle have acted as government advisors in the areas of

conservation and biodiversity resource management pest control food policy genetically modified crops sustainable agriculture international development defence against biological weapons and epidemiology and infectious disease control In recounting the science they carried out and how they made their careers the book reflects also on the role of the group and the nature of scientific success *The Role of Body Size in Multispecies Systems* Andrea Belgrano, Julia Reiss, 2011-11-16 This thematic volume represents an important and exciting benchmark in the study of integrative ecology synthesizing and showcasing current research and highlighting future directions for the development of the field *Effects of Anthropogenic Noise on Animals* Hans Slabbekoorn, Robert J. Dooling, Arthur N. Popper, Richard R. Fay, 2018-08-20 Over the past several years many investigators interested in the effects of man made sounds on animals have come to realize that there is much to gain from studying the broader literature on hearing sound and the effects of sound as well as data from the effects on humans It has also become clear that knowledge of the effects of sound on one group of animals e g birds or frogs can guide studies on other groups e g marine mammals or fishes and that a review of all such studies together would be very useful to get a better understanding of the general principles and underlying cochlear and cognitive mechanisms that explain damage disturbance and deterrence across taxa The purpose of this volume then is to provide a comprehensive review of the effects of man made sounds on animals with the goal of fulfilling two major needs First it was thought to be important to bring together data on sound and bioacoustics that have implications across all taxa including humans so that such information is generally available to the community of scholars interested in the effects of sound This is done in Chaps 2 5 Second in Chaps 6 10 the volume brings together what is known about the effects of sound on diverse vertebrate taxa so that investigators with interests in specific groups can learn from the data and experimental approaches from other species Put another way having an overview of the similarities and discrepancies among various animal groups and insight into the how and why will benefit the overall conceptual understanding applications in society and all future research **African Journal of Marine Science** ,2008 **Perspectives on Oceans Past** Kathleen Schwerdtner Máñez, Bo Poulsen, 2016-05-24 Marine environmental history analyses the changing relationships between human societies and marine natural resources over time This is the first book which deals in a systematic way with the theoretical backgrounds of this discipline Major theories and methods are introduced by leading scholars of the field The book seeks to encapsulate some of the major novelties of this fascinating new discipline and its contribution to the management conservation and restoration of marine and coastal ecosystems as well as the cultural heritages of coastal communities in different parts of the world Fishery Bulletin ,2009
