Advances In Insect Physiology Volume 27:

Advances in Insect Physiology Stephen Simpson, 2003-12-22 This volume is a serial index volume containing Volumes 1 to 29 of *Advances in Insect Physiology*

Advances in Insect Physiology, 2019-05-21 *Advances in Insect Physiology* Volume 56 provides readers with the latest interdisciplinary reviews on the topic. It is an essential reference source for invertebrate physiologists, neurobiologists, entomologists, zoologists, and insect chemists. With this new release focusing on the effects of resource limitation on the strengths of tradeoffs in insect lifecycles, the circadian system in insects, cellular molecular and functional organization, Molecular Physiology of the Insect Midgut, The Cryptonephridic system in Lepidoptera, Subsocial insects, and the physiology of parental care, Mechanisms regulating phenotypically plastic traits in wing polymorphic insects, and more.

Death-Feigning in Insects Masaki Sakai, 2021-03-30 This book examines the mechanisms and functions of tonic immobility, the so-called death feigning behavior or thanatosis or animal hypnosis. The chapters cover the neurophysiological and experimental studies on insects, the functional significance of death feigning, examination of the freezing and immobility behavior in insects through environment, physiology, genetics, and responses to ultrasound and vibration. It also covers tonic immobility and freezing behavior in fish from the perspective of vertebrates. Tonic immobility is an interesting behavior that occurs reflexively in various animals under physical restraint by predators. The physiological mechanism of thanatosis was extensively investigated during 1960-1980. Researchers have proposed hypotheses to explain the mechanism underlying tonic immobility in vertebrates: local inhibition of the central nervous system, acceleration of the limbic system, abnormal control of the autonomic nervous system. On the other hand, the peripheral and central mechanisms of tonic immobility were intensely investigated at a behavioral and a neuronal level in stick insects and crickets. In the 1970s, behavioral ecology has shed light on the aspect of an ultimate factor for tonic immobility. Ethologists and ecologists challenged this matter in the laboratory and natural habitats and have collected evidence for its functional roles using mainly insects such as beetles, moths, locusts. More recently, studies of tonic immobility in humans are drawing attention as clinicians are trying to explain the defencelessness of rape victims from the viewpoint of animal hypnosis. This timely publication provides an understanding of the past and present research of the mechanisms and functions of tonic immobility. This book is intended for researchers and undergraduate/graduate students in the field of zoology, including physiology, ethology, ecology, and human behavior. It will also appeal to the public audience who has an interest in animal behavior, including human behavior.

Insights from Comparative Hearing Research Christine Köppl, Geoffrey A. Manley, Arthur N. Popper, Richard R. Fay, 2014-07-08 The hearing organs of non-mammals, which show quite large and systematic differences to each other and to those of mammals, provide an invaluable basis for comparisons of structure and function. By taking advantage of the vast diversity of possible study organisms provided by the library of biological diversity, it is possible to learn how complex functions are realized in the inner ear through the evolution of specific structural

cellular and molecular configurations Insights from Comparative Hearing Research brings together some of the most exciting comparative research on hearing and shows how this work has profoundly impacted our understanding of hearing in all vertebrates *Insect Hearing* Gerald S. Pollack, Andrew C. Mason, Arthur N Popper, Richard R Fay, 2016-06-06 Insect Hearing provides a broadly based view of the functions mechanisms and evolution of hearing in insects With a single exception the chapters focus on problems of hearing and their solutions rather than being focused on particular taxa The exception hearing in *Drosophila* is justified because due to its ever growing toolbox of genetic and optical techniques *Drosophila* is rapidly becoming one of the most important model systems in neurobiology including the neurobiology of hearing Auditory systems whether insectan or vertebrate must perform a number of basic tasks capturing mechanical stimuli and transducing these into neural activity representing the timing and frequency of sound signals distinguishing between behaviorally relevant signals and other sounds and localizing sound sources Studying how these are accomplished in insects offers a valuable comparative view that helps to reveal general principles of auditory function **Colorants for**

Non-Textile Applications H.S. Freeman, A.T. Peters, 2000-05-03 This volume examines the chemistry of natural and synthetic dyes produced for non textile markets where much new basic research in color chemistry is now taking place The first group of chapters covers the design synthesis properties and application technology pertaining to dyes for digital printing and photography The reader will be pleased with the breadth and depth of information presented in each case Of particular interest is the discussion of strategies for the design of dyes in these categories with emphasis on enhancing technical properties In view of certain new developments the ink jet chapter includes results from studies pertaining to dyes for textiles The three chapters comprising Section II of this volume cover the broad subject of dyes for food drug and cosmetic applications and then provide an in depth look at dyes for biomedical applications and molecular recognition The chapter on dyes for molecular recognition places emphasis on applications in the biological sciences including sensory materials and artificial receptors While the former two topics have been covered elsewhere in the past the present chapters are unequalled in scope Section III provides an in depth review of the design of laser dyes and dye based functional materials In the first of the two chapters the major principles of laser operation are summarized This is followed by a discussion of spectroscopic properties such as activation and deactivation of absorbed light by laser dyes Approaches to the development of new laser dyes are presented The second chapter pertains to the synthesis of dicyanopyrazine based multifunctional dyes The visible and fluorescence spectra of these dyes in solution and the solid state are correlated with their three dimensional molecular structures Molecular stacking behavior and solid state properties of these multifunctional dye materials are presented The final group of chapters pertains to natural dyes and dyes for natural substrates In recent years the impression among certain consumers that natural is better safer has generated much interest in the use of natural dyes rather than synthetics This has led to a few short discussion papers in which the environmental advantages to using natural dyes have

been questioned The initial chapter in this group provides both a historical look at natural dyes and a comprehensive compilation of natural dye structures and their sources Though natural dyes are of interest as colorants for textiles selected ones are used primarily in food and cosmetics Chapter ten provides an update on the author s previous reviews of structure color relationships among precursors employed in the coloration of hair Chemical constitutions characterizing hair dye structures are presented along with a summary of available precursors and their environmental properties Similarly the chapter on leather dyes covers constitutions and nomenclature in addition to providing interesting perspectives on the origin and use of leather the dyeing of leather and key environmental issues This volume is concluded with another look at colors in nature In this case rather than revisiting colors in plant life an interesting chapter dealing with color in the absence of colorants is presented Chapter twelve covers basic concepts of color science and illustrates how 3 D assemblies leading to a plethora of colors are handled in nature It is our hope that this atypical color chemistry chapter will invoke ideas that lead to the design of useful colorants The chapters presented in this volume demonstrate that color chemistry still has much to offer individuals with inquiring minds who are searching for a career path This work highlights the creativity of today s color chemists and the wide variety of interesting non textile areas from which a career can be launched The Ecology of Animal Senses Gerhard von der Emde, Eric Warrant, 2015-12-16 The collection of chapters in this book present the concept of matched filters response characteristics matching the characteristics of crucially important sensory inputs which allows detection of vital sensory stimuli while sensory inputs not necessary for the survival of the animal tend to be filtered out or sacrificed The individual contributions discuss that the evolution of sensing systems resulted from the necessity to achieve the most efficient sensing of vital information at the lowest possible energetic cost Matched filters are found in all senses including vision hearing olfaction mechanoreception electroreception and infrared sensing and different cases will be referred to in detail

Recent Developments in Insect Neurohormones M. Raabe, 2012-12-06 The most striking fact revealed by investigations of insect neurohormones is that insects are as well supplied with neurohormones as mammals since neurohormones regulate not only the functioning of the endocrine glands prothoracic gland and corpora allata but also most physiological processes Our knowledge of neurohormones developed originally from anatomocytological investigations and experimental studies Today accurate bio assays have been devised for studying both in vivo and in vitro physiological processes and RIA determination has yielded knowledge of titer modifications of humoral factors Much is also known about neurohormone purification and several neurohormones have even been identified in different species Immunocytochemistry has made it possible to demonstrate in their origin and release sites the presence of insect neurohormones whose structure has been elucidated Moreover the presence of vertebrate and invertebrate neuropeptides has been demonstrated in insects As regards biogenic amines methods of detection have been greatly refined and it is now possible to identify the cell bodies and axons of the main biogenic amines Other new methods such as cobalt chloride impregnation or Lucifer yellow staining

have revealed the axonal pathways and the location of particular neurons The mechanisms of action of neurohormones have been investigated in several cases and the results of these investigations will be related in the chapters which follow The Publishers' Trade List Annual ,1976 Exploring Animal Behavior Through Sound: Volume 2 Christine Erbe,Jeanette A. Thomas,2025-07-03 This open access book offers a profound exploration of the acoustic world of animals Organized into nine chapters by taxonomy invertebrates insects amphibians reptiles fishes birds and mammals subterranean terrestrial and marine it delves into sound production sound reception sound function and the impacts of noise on these creatures As the second volume of Exploring Animal Behavior Through Sound it builds upon the bioacoustic concepts and methodologies established in the first volume By attuning ourselves to the sounds of nature we can gain valuable insights into animal behavior distribution and demographics as well as their habitat characteristics and needs and the effects of noise on their behavior This book will serve as a valuable resource for students and researchers in animal ecology seeking to incorporate acoustics into their research toolkit as well as for environmental managers in industry and government **Short Views on Insect Genomics and Proteomics** Chandrasekar Raman,Marian R. Microbes: The Foundation Stone of the Biosphere Christon J. Hurst, 2021-05-01 This collection of essays discusses fascinating aspects of the concept that microbes are at the root of all ecosystems The content is divided into seven parts the first of those emphasizes that microbes not only were the starting point but sustain the rest of the biosphere and shows how life evolves through a perpetual struggle for habitats and niches Part II explains the ways in which microbial life persists in some of the most extreme environments while Part III presents our understanding of the core aspects of microbial metabolism Part IV examines the duality of the microbial world acknowledging that life exists as a balance between certain processes that we perceive as being environmentally supportive and others that seem environmentally destructive In turn Part V discusses basic aspects of microbial symbioses including interactions with other microorganisms plants and animals The concept of microbial symbiosis as a driving force in evolution is covered in Part VI In closing Part VII explores the adventure of microbiological research including some reminiscences from and perspectives on the lives and careers of microbe hunters Given its mixture of science and philosophy the book will appeal to scientists and advanced students of microbiology evolution and ecology alike

Bulletin of the Entomological Society of America, 1986 *Insect immunity and its interactions with microorganisms and parasitoids* Fengliang Jin, Erjun Ling, Yonggyun Kim, Zhen Zou, 2023-12-18 Insects are a group of abundant and diverse organisms that have successfully adapted to the most challenging conditions on earth The success of insects in adverse environments indicates the advanced defense mechanisms employed by these organisms

but they are often targeted by specialized microorganisms viruses bacteria nematodes fungi and parasitoids Insects exhibit both humoral and cellular immune responses against pathogens The lack of an adaptive immune system has compelled insects to choose immediate non specific but sophisticated responses that include the production of antimicrobial peptides phenoloxidase apoptosis phagocytosis encapsulation and nodulation In recent decades technological advances have been made in decrypting the molecular and mechanistic basis of insect immunity However there is a need to understand the insect immune responses to single or mixed encounters Future challenges include a better understanding of functional cooperation of various endosymbiotic microbes and their role in insect defenses Post transcriptional modulation of immune responses regulated by non coding RNAs microRNA long non coding RNAs has become critically important to study by using modern bioinformatics and experimental tools Therefore investigating the dynamics of insect immune responses will substantially increase the capacity for confronting harmful agricultural and medical pests Furthermore most insect cellular immune activities have been conducted in a laboratory setting therefore confirming the existing knowledge in a natural environment would provide crucial information *The Insects* Reginald Frederick Chapman,1998 A long awaited update of a well established standard text and respected reference work for students and researchers in zoology entomology and physiology this fourth edition has been rewritten throughout while retaining the successful structure of the earlier editions Illustrations have been augmented with electron micrographs **Insect Migration** V. Alistair Drake,A. Gavin Gatehouse,1995-09-14 A comprehensive account of insect migration in its ecological and evolutionary context
