Advances in Computers Marvin Zelkowitz, 2009-06-12 This is volume 72 of Advances in Computers a series that began back in 1960 and is the oldest continuing series chronicling the ever changing landscape of information technology Each year three volumes are produced which present approximately 20 chapters that describe the latest technology in the use of computers today In this volume 72 we present the current status in the development of a new generation of high performance computers The computer today has become ubiquitous with millions of machines being sold and discarded annually Powerful machines are produced for only a few hundred U S dollars and one of the problems faced by vendors of these machines is that due to the continuing adherence to Moore's law where the speed of such machines doubles about every 18 months we typically have more than enough computer power for our needs for word processing surfing the web or playing video games However the same cannot be said for applications that require large powerful machines Applications such as weather and climate prediction fluid flow for designing new airplanes or automobiles or nuclear plasma flow require as much computer power as we can provide and even that is not enough Today s machines operate at the teraflop level trillions of floating point operations per second and this book describes research into the petaflop region 1 015 FLOPS The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015 Advances in Computers Marvin Zelkowitz, Ph.D., MS, BS., 2009-05-20 This is volume 75 of Advances in Computers This series which began publication in 1960 is the oldest continuously published anthology that chronicles the ever changing information technology field In these volumes we publish from 5 to 7 chapters three times per year that cover the latest changes to the design development use and implications of computer technology on society today In this present volume we present five chapters describing new technology affecting users of such machines In this volume we continue a theme presented last year in volume 72 High Performance Computing In volume 72 we described several research projects being conducted in the United States on the development of a new generation of high performance supercomputers

Nagel, Holger Brunst, Hartmut Mix, 2019-02-14 This book presents the proceedings of the 11th International Parallel Tools Workshop a forum to discuss the latest advances in parallel tools held September 11 12 2017 in Dresden Germany High performance computing plays an increasingly important role for numerical simulation and modeling in academic and industrial research At the same time using large scale parallel systems efficiently is becoming more difficult A number of tools addressing parallel program development and analysis has emerged from the high performance computing community over the last decade and what may have started as a collection of a small helper scripts has now matured into production grade frameworks Powerful user interfaces and an extensive body of documentation together create a user friendly environment for parallel tools Fault-Tolerance Techniques for High-Performance Computing Thomas Herault, Yves Robert, 2015-07-01 This timely text presents a comprehensive overview of fault tolerance techniques for high performance computing HPC The text opens with a detailed introduction to the concepts of checkpoint protocols and scheduling algorithms prediction replication silent error detection and correction together with some application specific techniques such as ABFT Emphasis is placed on analytical performance models This is then followed by a review of general purpose techniques including several checkpoint and rollback recovery protocols Relevant execution scenarios are also evaluated and compared through quantitative models Features provides a survey of resilience methods and performance models examines the various sources for errors and faults in large scale systems reviews the spectrum of techniques that can be applied to design a fault tolerant MPI investigates different approaches to replication discusses the challenge of energy consumption of fault tolerance methods in extreme scale systems Scientific and Technical Aerospace Reports ,1972 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Comprehensive Semiconductor Science and Technology, 2024-11-28 Semiconductors are at the heart of modern living Almost everything we do be it work travel communication or entertainment all depend on some feature of semiconductor technology Comprehensive Semiconductor Science and Technology Second Edition Three Volume Set captures the breadth of this important field and presents it in a single source to the large audience who study make and use semiconductor devices Written and edited by a truly international team of experts and newly updated to capture key advancements in the field this work delivers an objective yet cohesive review of the semiconductor world. The work is divided into three sections fully updated and expanded from the first edition The first section is concerned with the fundamental physics of semiconductors showing how the electronic features and the lattice dynamics change drastically when systems vary from bulk to a low dimensional structure and further to a nanometer size Throughout this section there is an emphasis on the full understanding of the underlying physics especially quantum phenomena The second section deals largely with the transformation of the conceptual

framework of solid state physics into devices and systems which require the growth of high purity or doped bulk and epitaxial materials with low defect density and well controlled electrical and optical properties. The third section is devoted to design fabrication and assessment of discrete and integrated semiconductor devices. It will cover the entire spectrum of devices we see all around us for telecommunications computing automation displays illumination and consumer electronics. Provides a comprehensive global picture of the semiconductor world Written and Edited by an international team of experts. Compiles the most important semiconductor knowledge into one comprehensive resource. Moves from fundamentals and theory to more advanced knowledge such as applications allowing readers to gain a deeper understanding of the field. STAR, 1973
