Junction Resource Area Grazing Management ,1979 Reframing Deforestation James Fairhead, Melissa Leach, 2003-09-02 This study reviews how West African deforestation is represented and the evidence which informs deforestation orthodoxy On a country by country basis covering Sierra Leone Liberia Cote D Ivoire Ghana Togo and Benin and using historical and social anthropological evidence the authors evaluate this orthodox critically Reframing Deforestation suggests that the scale of deforestation wrought by West African farmers during the twentieth century has been vastly exaggerated The authors argue that global analyses have unfairly stigmatised West Africa and obscured its more sustainable even landscape enriching practices Stessing that dominant policy approaches in forestry and conservation require major rethinking worldwide Reframing Deforestation illustrates that more realistic assessments of forest cover change and more respectful attention to local knowledge and practices are necessary bases for effective and appropriate environmental policies **Wildlife and America** ,1978 *Bibliography on Land Utilization, 1918-36* ,1938 This bibliography has been

Forest Hydrology Mingteh Chang,2006-05-25 Although a few texts on forest hydrology are available they cover very little if any background on water resources On the other hand books dealing with water resources do not cover topics on forest water relations The one exception to this is *Forest Hydrology An Introduction to Water and Forests Now with the publication of a revised edition this volume adds information from recent studies to go even further in providing an introduction to forest hydrology that brings water resources and forest water relations into a single practical and comprehensive volume* Focusing on processes and general principles the first six chapters provide an introduction and basic background in water and water resources while the last seven chapters look at the impact of forests on water Between these two groupings is a chapter that serves as an entry to the study of forest impacts on water resources describing forests and forest characteristics important to water circulation sediment movement and stream habitat This second edition also features new information on forests and flooding forest and stream habitat snow vaporization processes and GIS methods in hydrology research examples on evaporation estimates and a new appendix on forest interception measurements Employing examples and case studies the book provides tools to help natural resource managers play an active role in policymaking and land use
