

# Module 5: Advanced Mechanics

## Projectile Motion

Analyse the motion of projectiles by resolving the motion into horizontal and vertical components, making the following assumptions:

- constant vertical acceleration due to gravity ( $g = 9.81 \text{ m/s}^2$ )
- zero air resistance ( $g = 0$ )

### ► Projectile Motion

A projectile motion is a two-dimensional motion. A projectile can be any object that is launched and moves as a parabolic path. Its displacement by the projectile's initial velocity and the force acting on it.

A projectile's general trajectory follows a parabolic path. The projectile's horizontal and vertical components of the motion are independent. Hence they are independent of each other. An object is launched as a projectile trajectory.

### ► Two-Dimensional Component of Motion

The object moves along as a projectile-like trajectory. It is the force caused by gravity that acts downwards. Therefore, the vertical components of the projectile is acceleration due to gravity's acceleration of  $9.81 \text{ m/s}^2$  downwards.
