Advanced Surgical Techniques for Rural Surgeons Amy L. Halverson, David C. Borgstrom, 2014-11-30 *Advanced Surgical Techniques for Rural Surgeons* Amy L. Halverson, David C. Borgstrom, 2014-11-03 This unique reference fulfills the unmet need of a textbook that addresses the scope of practice for surgeons practicing in rural regions. The text provides up to date content covering a wide breadth of topics relevant to surgical care in rural areas with focus on the surgical diseases that are often treated by surgical subspecialists in the urban setting. Written by experts in each subspecialty, the text focuses on procedural aspects of surgical patient care. The first section discusses practice issues unique to rural surgery and provides an overview of applying principles of quality improvement to surgical practice. Subsequent chapters cover specific surgical procedures. Each chapter includes a brief discussion of indications and contraindications for surgery. The surgical technique is described with attention to important anatomic details. Key portions of the procedure are highlighted including potential complications and how to avoid them. Procedure specific perioperative care is also discussed. Supported with ample illustrations and images. *Advanced Surgical Techniques for Rural Surgeons* is a valuable resource for surgeons currently in practice or preparing to practice in a rural area as well as surgical technicians, surgical nurse practitioners, and physician assistants. Appropriate Use of Advanced Technologies for Radiation Therapy and Surgery in Oncology National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, National Cancer Policy Forum, 2016-04-16 In recent years the field of oncology has witnessed a number of technological advances including more precise radiation therapy and minimally invasive surgical techniques. Three

dimensional 3D stereotactic and proton beam radiation therapy as well as laparoscopy and robotic surgery can enhance clinician's ability to treat conditions that were clinically challenging with conventional technologies and may improve clinical outcomes or reduce treatment related problems for some patients. Both patients and physicians seek access to these new technologies which are rapidly being adopted into standard clinical practice. Such demand is often propelled by marketing that portrays the new technologies as the latest and greatest treatments available. However, evidence is often lacking to support these claims and these novel technologies usually come with higher price tags and are often used to treat patients who might have achieved similar benefits from less expensive conventional treatment. The increased cost of novel treatments without adequate assessment of how they affect patient outcomes is a pressing concern given that inappropriate use of expensive technologies is one of the key factors that threaten the affordability of cancer care in the United States. To explore these issues further, the National Cancer Policy Forum (NCPF) of the Institute of Medicine organized a workshop in July 2015. This is the third NCPF workshop in a series examining the affordability of cancer care. Participants explored clinical benefits and comparative effectiveness of emerging advanced technologies for cancer treatment in radiation therapy and surgery and potential strategies to assess the value and promote optimal use of new technologies in cancer treatment. This report summarizes the presentations and discussions from the workshop.

No Stones Left Unturned George Berci, Frederick L. Greene, 2021-08-09. This book is a tribute to early pioneers and later innovators in applications of surgical principles for biliary stone disease. It is written as a challenge to all surgeons applying these principles to approach the biliary system with the safest and most appropriate technical support. This book is also written as a challenge to all those involved in the training of future generations of surgeons in the hope that critical standards in biliary surgical management will be promulgated and highlighted. The text contains knowledge from surgical leaders who played a vital part in the modern management of biliary stone disease. These contributions include their perceptions, wisdom, and recommendations for the future. In doing so, the authors aim to discover ways to make the surgical management of biliary stone disease even better. This volume, thoughtfully curated by two eminent surgical scholars, provides perhaps the most complete history of the field. Dr. Berci and Dr. Greene enlisted a remarkable panel of distinguished colleagues from around the world to discuss every important element of surgical practice. These elements include the resourcefulness of developing novel optics and instruments on the fly, the integration of new imaging capabilities into pre-operative assessments and intraoperative management, the challenge of educating prideful senior surgeons who were ill at ease with the distance imposed by a laparoscope, and the introduction of progressively more elegant ex vivo modules to train inexperienced juniors with limited open operative experience. Finally, it also discusses the never-ending task of ensuring the safety of one of the most common operations performed in the world, yet one with a persistent, if small, risk of life-altering injury to the biliary ducts. *No Stones Left Unturned* aims to build on a classic surgical text and then discusses the issues faced by surgeons performing biliary surgery in the modern era. It serves as a valuable

resource for surgeons practicing clinicians surgical residents and fellows that wish to apply this knowledge and improve upon the current standards of biliary surgical management
