Advances in Psychological Science, Volume 2 Fergus Craik, Michele Robert, Michel Sabourin, 2014-01-21 The chapters in this volume are the edited versions of invited addresses to the XXVI International Congress of Psychology held in Montr al in August 1996 As one major goal of the Congress was to promote communication among specializations in scientific psychology the speakers were asked to survey their research area and present their own work in a way that would be accessible to their colleagues in

other areas Another purpose of the meeting was to bring researchers together from different parts of the world reflecting their different approaches to the scientific study of mind brain and behavior Consequently the eminent researchers who have written the twenty six chapters included in the present volume were drawn from universities and research institutes in North America Europe Japan Russia Israel and New Zealand The chapters cover a range of topics in human and animal experimental psychology The first section deals with psychobiological processes the interplay of body and mind in determining intelligence stress and pain The next five chapters address current issues in neuropsychology and neuroscience including the neural correlates of attention and vision A third section looks at learning processes in humans and animals and a fourth deals with a range of topics in perception and cognition The final five chapters take a developmental perspective presenting theoretical and empirical analyses of the acquisition of perceptual and cognitive abilities Overall the collection illustrates the growing trend to break down traditional barriers between areas of experimental psychology there are many instances of profitable interactions between researchers studying aspects of behavior and those studying the biological bases of these behaviors The twenty six chapters give an excellent overview of current research in scientific psychology

Frames, Fields, and Contrasts Adrienne Lehrer, Eva Feder Kittay, Richard Lehrer, 2012-11-12 Recently there has been a surge of interest in the lexicon The demand for a fuller and more adequate understanding of lexical meaning required by developments in computational linguistics artificial intelligence and cognitive science has stimulated a refocused interest in linguistics psychology and philosophy Different disciplines have studied lexical structure from their own vantage points and because scholars have only intermittently communicated across disciplines there has been little recognition that there is a common subject matter The conference on which this volume is based brought together interested thinkers across the disciplines of linguistics philosophy psychology and computer science to exchange ideas discuss a range of questions and approaches to the topic consider alternative research strategies and methodologies and formulate interdisciplinary hypotheses concerning lexical organization The essay subjects discussed include alternative and complementary conceptions of the structure of the lexicon the nature of semantic relations and of polysemy the relation between meanings concepts and lexical organization critiques of truth semantics and referential theories of meaning computational accounts of lexical information and structure and the advantages of thinking of the lexicon as ordered
