Bioaccessibility and Digestibility of Lipids from Food Myriam M.-L.

Grundy,Peter J. Wilde,2021-01-19 The structure of a food influences the way it is transformed during processing and

digestion This in turn has an impact on nutrient bioaccessibility release and digestibility and subsequently on the physiological response and health of the individual who consumes that food Although evidence exists on the health benefits associated with the inclusion of certain lipid rich foods e g nuts dairy products and fish in the diet the mechanisms that explain the physiological effects and the long term benefits are not well understood Lipids in themselves have many beneficial health effects they are a source of energy and essential fatty acids they are structural components of cell membranes they are required to solubilise fat soluble compounds and they serve as precursors of hormones In addition the overall structure of the food containing the lipids plays a crucial role in determining health benefits notably by influencing lipid bioaccessibility and digestibility Bioaccessibility and digestibility of lipids from food uniquely focuses on the physico chemical properties of lipids and lipid rich food as well as the subsequent effects on human health Chapters from experts in food digestion examine food structure at both the macro and micro levels covering lipids from plant and animal food products The editors have developed the book for dietitians nutritionists and food scientists Clinicians and other health professionals educators in nutrition and others working in the food industry will also find the material relevant **Books in Print** ,1994

Sustainable Protein Production and Consumption: Pigs or Peas? Harry Aiking, Joop de Boer, Johan Vereijken, 2006-10-12 Sustainable Protein Production and Consumption Pigs or Peas is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives The emphasis is on improving the food system by reducing the use of energy land and freshwater at the same time limiting the impacts on health and animal welfare associated with intensive livestock production It is clear that such a new perspective calls not only for advanced environmental and technological research but also for in depth societal research as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers In this unique multidisciplinary setting PROFETAS has opened up pathways for a major transition in protein food production and consumption not by just analyzing the food chain but rather by exploring the entire agricultural system including biomass for energy production and the use of increasingly scarce freshwater resources The study presented here is intended to benefit every stakeholder in the food chain from policymakers to consumers and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi level perspective **New Advances in the Basic and Clinical Gastroenterology** Tomasz Brzozowski, 2012-04-18 The purpose of this book was to present the integrative basic and clinical approaches based on recent developments in the field of gastroenterology The most important advances in the pathophysiology and treatment of gastrointestinal disorders are discussed including gastroesophageal reflux disease GERD peptic ulcer disease irritable bowel disease IBD NSAIDs induced gastroenteropathy and pancreatitis Special focus was addressed to microbial aspects in the gut including recent achievements in the understanding of function of probiotic bacteria their interaction with gastrointestinal epithelium and usefulness in the treatment of human disorders We hope that

this book will provide relevant new information useful to clinicians and basic scientists as well as to medical students all looking for new advancements in the field of gastroenterology
