Advances in Solid State Physics Bernhard Kramer, 2008 *Advanced Solid State Physics* Philip Phillips, 2012-03
Introduces students to the key research topics within modern solid state physics with the minimum of mathematics

Semiconductor Optics Claus F. Klingshirn, 2012-07-06 The updated and enlarged new edition of this book provides an introduction to and an overview of semiconductor optics from the IR through the visible to the UV It includes coverage of linear and nonlinear optical properties dynamics magneto and electrooptics high excitation effects some applications experimental techniques and group theory The mathematics is kept as elementary as possible The subjects covered extend from physics to materials science and optoelectronics New or updated chapters add coverage of current topics while the chapters on bulk materials have been revised and updated

Predictive Simulation of Semiconductor Processing Jarek Dabrowski, Eicke R. Weber, 2013-03-09 Predictive Simulation of Semiconductor Processing enables researchers and developers to extend the scaling range of semiconductor devices beyond the parameter range of empirical research It requires a thorough understanding of the basic mechanisms employed in device fabrication such as diffusion ion implantation epitaxy defect formation and annealing and contamination This book presents an in depth discussion of our current understanding of key processes and identifies areas that require further work in order to achieve the goal of a comprehensive predictive process simulation tool

Exciton Recombination in the Fullerene Phase of Bulk Heterojunction Organic Solar Cells George Frederick Burkhard, 2011 Finding alternatives to fossil fuel energy sources is necessary to stem global warming to provide economic and political independence and to keep up with increasing energy demand Because of their low cost flexibility and because the material resources needed to make them are abundant organic polymer solar cells are an attractive alternative to conventional solar technology Organic solar technology has been developing rapidly however with the best power conversion efficiencies at 8% much improvement is needed before it can be competitive with established solar technologies Poly 3 hexylthiophene 6 6 phenyl C61 butyric acid methyl ester P3HT PCBM solar cells are the most studied type of organic solar cell Nevertheless their loss mechanisms are still not fully understood In this work we study excitonic losses in the

PCBM phase of the blend We develop a way to accurately measure internal quantum efficiencies IQEs and use this technique to characterize P3HT PCBM devices We observe spectral dependence of the IQE and conclude that a majority of excitons generated in the PCBM are lost to Auger recombination with polarons that are trapped in that phase We also provide evidence that this process may happen in other materials and may be a critical factor in limiting exciton diffusion in organic semiconductors **Official Gazette** Philippines,2011 **Condensed Matter Physics** Michael P.
