Vapalahti, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been

born from the European spirit flourished in the European Association and have throughout been associated with this series. The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume. Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made. The contributions are written by specialists in the given fields and constitute the first part of each volume.

Hemodynamic Aspects of Cerebral Angiomas Werner Hassler, 2012-12-06 Up to date the treatment of arteriovenous racemose angiomas of the brain remains unsatisfactory Intraoperative hemorrhages post embolizational or postoperative deficits depending on the site and size of the A VM as well as inoperability of rare angioma types have promoted the technical improvement of diagnostic and therapeutic approaches Nevertheless some pathophysiological problems of A VM hemodynamics have not been solved Many angiographical studies observations during embolization and operation dopplersonographical and other perfusion measurements provided some insight Sufficient animal models have yet to be developed in order to elucidate the pathophysiological mechanisms This monograph describes A V fistula models in cats and rats both conventional and newly developed which allow a better comparison with human cerebral angiomas than previous ones The most important result is that the model of the breakthrough of arterial pressure waves into the capillaries following a failure of cerebrovascular regulation cannot be confirmed Rather according to the findings in precapillary vessels presented here the regulation functions normally so that a breakdown of regulation cannot be responsible for global brain edema often seen after removal of angiomas The regulation was demonstrated using different methods most important of which being the CO response of 2 brain vessels to varying CO contents of the inhaled air Angiographical dopplersonographical and 2 perioperative dopplersonographical as well as intraoperative measurements of flow and pressure have been applied *Schmidek and Sweet: Operative Neurosurgical Techniques E-Book* Alfredo Quinones-Hinojosa, 2012-05-10

Surgery of the Skull Base Madjid Samii,Wolfgang Draf,2012-12-06 The region of the skull base was long considered a surgical barrier because of its complex anatomy With few exceptions the region immediately beyond the dura or bony skull base constituted a no man s land for the surgeon working from the other direction A major reason for this was the high morbidity associated with operative procedures in that area using traditional dissection techniques This situation changed with the advent of the operating microscope Used initially by ear nose and throat specialists for resective and reconstructive surgery

of the petrous bone and paranasal sinuses the operating microscope was later introduced in other areas and neurosurgeons began using it in the mid 1960s. With technical equality thus established the groundwork was laid for taking a new systematic and interdisciplinary approach to surgical problems of the skull base. Intensive and systematic cooperation between ear, nose and throat surgeons and neurologic surgeons had its origins in the departments of the University of Mainz, kindly supported by our chairmen Prof Dr Dr hc Kurt Schiirmann, Department of Neurosurgery and Prof Dr W Kley, Department of Ear, Nose and Throat Diseases, Head and Neck Surgery. The experience gained from this cooperation was taught in workshops held in Hannover from 1979 to 1986, acquiring a broader interdisciplinary base through the participation of specialists from the fields of anatomy, pathology, neuroradiology, ophthalmology and maxillofacial surgery.
