**Cellular and Molecular Toxicology** J.P. Vanden Heuvel,W.F. Greenlee,G.H. Perdew,William B. Mattes,2002-02-14  
Volume 14 in the series Comprehensive Toxicology extends and complements the previously published 13 volume set This volume will be available separately Toxicology is the study of the nature and actions of chemicals on biological systems In more primitive times it really was the study of poisons However in the early 1500s it was apparent to Paracelsus that the dose differentiates a poison and a remedy Clearly the two most important tenets of toxicology were established during that time The level of exposure dose and the duration of exposure time will determine the degree and nature of a toxicological response Since that time the discipline of toxicology has made major advances in identifying and characterizing toxicants The growth of toxicology as a scientific discipline has been driven to a large extent by the use of extremely powerful molecular and cell biology techniques The overall aim of this volume is to demonstrate how these advances are being used to elucidate causal pathways or linkages for potential adverse health consequences of human exposure to environmental chemicals or radiation A unique feature of this volume is its illustration of how carefully designed studies of the molecular mechanisms of chemical action provide not only understanding of the potential toxicity of the chemical under investigation but also new insights into the functioning of the biological system used as an experimental model Each chapter contains a listing of major peer reviewed articles and reviews and useful web sites In addition each chapter contains a broad introductory section that outlines the subsequent sections These Introductory and Overview sections are designed to be stand alone chapters and may be packaged as a textbook in graduate level courses

**Decision Support Systems for Weed Management** Guillermo R. Chantre,José L. González-Andújar,2020-07-31 Weed management Decision Support Systems DSS are increasingly important computer based tools for modern agriculture Nowadays extensive agriculture has become highly dependent on external inputs and both economic costs as well the negative environmental impact of agricultural activities demands knowledge based technology for the optimization and protection of non renewable resources In this context weed management strategies should aim to maximize economic profit by preserving and enhancing agricultural systems Although previous contributions focusing on weed biology and weed management provide valuable insight on many aspects of weed species ecology and practical guides for weed control no attempts have been made to highlight the forthcoming importance of DSS in weed management This book is a first attempt to integrate concepts and practice providing a novel guide to the state of art of DSS and the future prospects which hopefully would be of interest to higher level students academics and professionals in related areas

*Cellular and Molecular Toxicology and In Vitro Toxicology* Daniel Acosta,2017-07-28 This work concentrates on cellular and molecular toxicity of selected well known drugs or chemicals on the cardiovascular system The

primary objective is to provide a better understanding of the mechanisms by which xenobiotics are toxic to mammalian tissues and cells. The use of in vitro cellular and tissue systems provides attractive experimental models to assess toxic manifestations of xenobiotics. This work addresses the most recent findings on the cellular and molecular mechanisms of toxicity of several important cardiotoxic agents: doxorubicin, ethanol, cocaine, and the catecholamines. It presents an overview of vascular toxins and their biochemical effects. Included is a summary of in vitro cardiovascular techniques for assessing toxicity of xenobiotics. This publication is important for those in toxicology, tissue culture, pharmacology, in vitro toxicology, developmental biology, and related areas.
