Aeg Mitteilungen 19:

AEG Mitteilungen ,1924 **Landslide Analysis and Early Warning Systems** Benni Thiebes,2012-01-21 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas

Numerical Differential Protection Gerhard Ziegler,2012-01-27 Differential protection is a fast and selective method of protection against short circuits It is applied in many variants for electrical machines trans formers busbars and electric lines Initially this book covers the theory and fundamentals of analog and numerical differential protection Current transformers are treated in detail including transient behaviour impact on protection performance and practical dimensioning An extended chapter is dedicated to signal transmission for line protection in particular modern digital communication and GPS timing The emphasis is then placed on the different variants of differential protection and their practical application illustrated by concrete examples This is completed by recommendations for commissioning testing and maintenance Finally the design and management of modern differential protection is explained by means of the latest Siemens SIPROTEC relay series As a textbook and standard work in one this book covers all topics which have to be paid attention to for planning designing configuring and applying differential protection systems The book is aimed at students and engineers who wish to familiarise themselves with the subject of differential protection as well as the experienced user entering the area of numerical differential protection Furthermore it serves as a reference guide for solving application problems For the new edition all contents have been revised extended and updated to the latest state of the art of protective relaying **Union List of**
