Don Purdy, Joel & Todd Liesbesfeld, 2008-09 This Everyone book attempts to guide the reader through the more essential steps of understanding

the basic principles or elements that constitute the daily work of investigators in fields relating to computing and electrical loss. The chapters are meant to set a foundation for people who may want to enter the field of investigations or are at the beginning of a career in the area or are seasoned investigators looking to delve into more contemporary areas of investigations or for persons that are just interested in reading about matters or topics that are currently revealed in differing forms of media such as in the successful TV drama series CSI. The book is formatted sequentially so that the reader can review important legal matters that are a part of most investigations and then go on to peruse the elements of basic electrical principles as they apply to certain types of fire and fault losses. These beginning chapters set a broad stage for the various areas of computing that follow. The book does not necessarily have to be read in the order that it was written. In a sense the reader may choose to use the book as a reference book. The chapters were written for the most part to be able to stand alone as monographs. There are many chapters that review a broad range of more common topics and there are chapters concerned with more esoteric areas of computing and electronics. Some of these chapters discuss the high tech methods that are sometimes deployed by thieves, terrorists, pedophiles, stalkers, etc. All of the co-authors reflect their experience as individuals that work closely with the criminal justice and civil institutions.
