

Ch. 12 Study Guide

1. How can communicable diseases be prevented?
Through proper handwashing education and testing.
2. Describe the three stages of an HIV infection.
The three stages of human immunodeficiency virus (HIV) include acute HIV infection: develops within 2 to 4 weeks after infection with HIV. During this time, some people have flu-like symptoms, such as fever, headache, and rash. In the acute stage of infection, HIV multiplies rapidly and spreads throughout the body
chronic HIV infection: During this stage, HIV continues to multiply in the body but at very low levels. People with chronic HIV infection may not have any HIV-related symptoms
acquired immune deficiency syndrome: final, most severe stage of HIV infection. Because HIV has severely damaged the immune system, the body cannot fight off opportunistic infections

All of the following are ways HIV can be transmitted except:

- a. HIV-positive mother breastfeeding her infant
 - b. Kidney transplant from an HIV-positive donor
 - c. Drinking from the same cup as an HIV-positive person
 - d. HIV-positive female that delivers a baby via c-section
3. Why are youth at a greater risk for HIV infection?
 4. Which of the following STDs can be cured? (selected all that apply)
 - a. HPV
 - b. Syphilis
 - c. Gonorrhea
 - d. Hepatitis B
 - e. Chlamydia
 5. Explain how gonorrhea can lead to pelvic inflammatory disease (PID) in women.
PID happens when bacteria moves from your vagina and cervix to other parts of your body. It can lead to chronic pain and other serious health problems, like infertility.
 6. Why is tertiary syphilis a bigger concern in developing countries than it is in the United States?
