Klein, 2000-09-30 The international symposia on blood transfusion in Groningen have taken place without interruption since 1976 Each year Dr Smit Sibinga and his team have not only organized a meeting on timely topics in blood transfusion but also succeeded in attracting prominent chairmen and speakers The subject of the 24th Symposium was Molecular Biology in Blood Transfusion and it was chaired by Dr Harvey G Klein National Institutes of Health USA In this book of proceedings an extraordinary range of subjects is covered including diagnostic aspects virology quality control cell and protein processing as well as a section on new horizons in clinical medicine *Peripheral Blood Stem Cell Autografts* Eckart W. Wunder, Philippe R. Henon, 2012-12-06 The monograph edited by Drs Wunder and Henon on Peripheral Blood Stem Cell Autografts is extremely useful as well as timely It covers the state of the arts with respect to the use of hemopoietic stem cells collected from the peripheral blood for the reconstitution of hematopoiesis after myeloablative therapy If it is accepted that hematopoietic function in the mammalian organism is the result of stem cell seeding of an appropriate stromal matrix then the use of blood derived stem cells for hematopoietic reconstitution represents the physiological form of the re establishment of a hematopoietic bone marrow All observations to date are compatible with the assumption that stem cells migrate via the blood stream from extraembryonic hematopoietic tissue to the fetal liver to establish there a first intraembryonic site of blood cell formation and especially of stem cell replication and proliferation This fetal liver tissue appears then to be the major source for the seeding of fetal bone marrow stroma as it develops sequentially in all the bones of the skeleton in other words during most of the entire embryonic development There is a very high concentration of stem cells in the blood of the embryo more than 20000 CFU GM per ml in the 22nd week and the stem cells in cord blood seem to be the tail end of a dramatic stem cell traffic in the embryo to establish the hemopoietic as well as lymphopoietic tissue

low dose radioactive contaminants that were emitted from the Chernobyl Nuclear Power Plant The official discussions emanating from the IAEA and associated UN agencies e g the Chernobyl Forum reports have largely downplayed or ignored many of the findings reported in the Eastern European scientific literature and as a consequence these reports have erred on the side of negative findings simply because much of what was known was not included in their assessments This new book provides a complete and extensive summary of all known research including that published in Russian and Ukrainian and provides new insights to the likely long term health and environmental consequences of nuclear accidents NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com/nyas ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and discounts on print volumes Please visit <http://www.nyas.org/MemberCenter/Join.aspx> for more information about becoming a member
