

## Describe metarterioles and capillary beds.

### - Capillary Bed Anatomy

- Regulated by chemical conditions and arteriole vasomotor nerves
- May be flooded or almost completely cut off depending on body conditions
- Pre capillary Sphincters regulate blood flow

### - Metarterioles

- A ~~metarteriole~~ is a type of vessel that has structural characteristics of both an arteriole and a capillary. Slightly larger than the typical capillary, the smooth muscle of the tunica media of the ~~metarteriole~~ is not continuous but forms rings of smooth muscle (sphincters) prior to the entrance to the capillaries

### - Fenestrated Capillary

- Found in kidneys, small intestines, and endocrine glands
- Have both intercellular clefts and "holes" or fenestrations through plasma membrane
- Needed for active absorption of filtrate formation

### - Sinusoid

- Found in bone marrow, spleen, adrenal medulla and liver
- Large lumen & very porous
- Permit entry & exit of large molecules & cells
- Blood flows sluggishly to allow modifications
