

Molten polymer (parison) is extruded vertically into the open mold cavity.

The mold closes around the parison, and air pressure is applied to begin forming the shape.

The parison is rotated against the mold walls, forming the bottle body, neck, and finish simultaneously.

Excess material at the top and bottom is trimmed to achieve a clean finish.

The mold opens, and the newly formed bottle is ejected.

The bottle's neck and lip are precisely trimmed to ensure proper sealing with closures.
