

BLOOD BANK QUALITY MANAGEMENT

Blood banks must provide quality to their customers in many forms, including:

- Safe, satisfying donation experiences for blood donors.
- Accurately labeled and tested blood components provided to transfusion services.
- Timely, accurate transfusion services provided to physicians and other health-care personnel.
- Safe and efficacious blood transfusions to patients.

The method for bringing this quality philosophy into all operations involves each facility developing a

foundation of quality:

- Quality control (QC)
- Quality assurance (QA)
- Quality management system (QMS)

Blood bank compliance with federal regulations and accreditation standards is required by the following

organizations:

- United States Food and Drug Administration (FDA)
- The Joint Commission
- College of American Pathologists (CAP)
- AABB (formerly known as American Association of Blood Banks)

COMPLIANCE VS QUALITY MANAGEMENT

- ☒ **Compliance program** – evaluate how effectively the facility meets regulatory and accreditation requirements by detecting errors, deficiencies, and deviations
- ☒ **Compliance inspections** – measure the state of the facility's program with respect to the applicable requirements and are usually conducted every 2 years.
- ☒ **Quality management (QM)** – Is actively and continuously practiced by blood bank leaders, managers, and staff throughout all blood bank operations.

QUALITY CONTROL

- All blood bank medical laboratory scientists and technicians are familiar with routine blood bank QC procedures:
 - ✓ Daily testing the reactivity of blood typing reagents.
 - ✓ Calibrating serologic centrifuges;
 - ✓ Timer checks
 - ✓ Monitoring temperatures
 - ✓ Manufacturers' package inserts,
 - ✓ Regular performance of QC

QUALITY MANAGEMENT	
- Activities of the management function that determine the quality policy	
QUALITY SYSTEM	Organizational structure, procedures, processes, and resources needed to implement quality management
QUALITY ASSURANCE	Planned, systematic activities implemented within the quality system to provide confidence that requirements for quality will be fulfilled
QUALITY CONTROL	Operational techniques and activities used to fulfill the requirements for quality

Individualized Quality Control Plan (IQCP)

- Laboratory's Risk Assessment
- Pre-analytic, Analytic, and Post-Analytic Processes
- Customize its QC program
