Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20

For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens. However, these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist. As a result, the use of biological controlling agents is increasing. This book is a comprehensive and authoritative handbook of biological control.

Linear Systems Theory Ben M. Chen, Zongli Lin, Yacov Shamash, 2012-12-06
Structural properties play an important role in our understanding of linear systems in the state space representation. The structural canonical form representation of linear systems not only reveals the structural properties but also facilitates the design of feedback laws that meet various control objectives. In particular, it decomposes the system into various subsystems. These subsystems along with the interconnections that exist among them clearly show the structural properties of the system. The simplicity of the subsystems and their explicit interconnections with each other lead us to a deeper insight into how feedback control would take effect on the system and thus to the explicit construction of feedback laws that meet our design specifications. The discovery of structural canonical forms and their applications in feedback design for various performance specifications has been an active area of research for a long time. The effectiveness of the structural decomposition approach has also been extensively explored in nonlinear systems and control theory in the recent past. The aim of this book is to systematically present various canonical representations of the linear system that explicitly reveal different structural properties of the system and to report on some recent developments on its utilization in system analysis and design.

Nuclear Science Abstracts, 1952 Prevention and Control of Infections in Hospitals Bjørg Marit Andersen, 2019-02-25
This volume offers extensive information on preventive and infection surveillance procedures, routines, and policies adapted to the optimal infection control level needed to tackle today's microbes in hospital practice. It especially focuses on preventive measures for serious hospital infections. Each chapter includes a practical section that addresses the main aspects of procedures and treatment and a theoretical section that contains updated documentation that can be used for further study or to help select infection control measures. Infection control concerns all healthcare professionals working directly or indirectly with patients in diagnosis, treatment, isolation, measures, operations, equipment, drugs, cleaning, textiles, transport, porter service, food, and water, building, and maintenance, etc. Hygiene and environmental control is central to infection prevention for patients, visitors, and staff alike. Good hygienic practices, individual infection control well implemented, and frequent environmental cleaning and a high professional standard of hygiene in the treatment and care of patients are essential to patient safety and a safe working environment. Addressing this essential topic, this book is intended for doctors, nurses, and other healthcare workers, students in health-related subjects, hospital managers, and health bureaucrats, as well as patients and their families.

Handbook of Immunological Properties of Engineered Nanomaterials Marina

Dobrovolskaia, Scott E. McNeil, 2013 The Handbook of Immunological Properties of Engineered Nanomaterials provides a comprehensive overview of the current literature methodologies and translational and regulatory considerations in the field of nanoimmunotoxicology. The main subject is the immunological properties of engineered nanomaterials. Focus areas include interactions between engineered nanomaterials and red blood cells, platelets, endothelial cells, professional phagocytes, T cells, B cells, dendritic cells, complement and coagulation systems, and plasma proteins, with discussions on nanoparticle sterility and sterilization. Each chapter presents a broad literature review of the given focus area, describes protocols and resources available to support research in the individual focus areas, highlights challenges, and outlines unanswered questions and future directions. In addition, the Handbook includes an overview of and serves as a guide to the physicochemical characterization of engineered nanomaterials essential to conducting meaningful immunological studies of nanoparticles. Regulations related to immunotoxicity testing of materials prior to their translation into the clinic are also reviewed. The Handbook is written by top experts in the field of nanomedicine, nanotechnology, and translational bionanotechnology, representing academia, government, industry, and consulting organizations and regulatory agencies. The Handbook is designed to serve as a textbook for students, a practical guide for research laboratories, and an informational resource for scientific consultants, reviewers, and policy makers. It is written such that both experts and beginners will find the information highly useful and applicable.

It contains literature review, case studies, and protocols. The book can serve as a source of information about nanoimmunotoxicology for both junior scientists and experts in the field. The authors have more than 10 years of experience with preclinical characterization of engineered nanomaterials used for medical applications and they share their experience with the readers. In addition, the international team of experts in the field provides the opinion and share the expertise on individual topics related to nanoparticle physicochemical characterization, hemocompatibility, and effects on the immune cell function. The second edition contains updated chapters from the first edition plus new chapters covering areas of tumor immunology, nanoparticle interaction with lymphatic system, mathematical modeling of protein corona utilization of nanoparticles for the delivery of antiviral drugs, extensive analysis of nanoparticle anti-inflammatory and immunosuppressive properties, novel ways of protecting therapeutic nanoparticles from the immune recognition, as well as case studies regarding nanoparticle sterilization, complement activation, protein binding, and immunotherapy of cancer. The second edition comes in 3 volumes. Volume 1 is focused on nanoparticle characterization, sterility, and sterilization, pyrogen contamination, and depyrogenation. It also contains an overview of regulatory guidelines, protocols for in vitro and in vivo immunotoxicity studies, and correlation between in vitro and in vivo immunoassays. Volume 2 is focused on

hematocompatibility of nanomaterials It provides comprehensive review and protocols for investigating nanoparticle interaction with erythrocytes platelets endothelial cells plasma coagulation factors and plasma proteins forming so called corona around nanoparticles Volume 3 is dedicated to nanoparticle interaction with and effects on the immune cell function It also contains examples of nanoparticle use for delivery of antiviral and anti inflammatory drugs Rehabilitation
