Partners in Science Robert E. Kohler, 1991 Robert Kohler shows exactly how entrepreneurial academic scientists became intimate partners in science with the officers of the large foundations created by John D Rockefeller and Andrew Carnegie and in so doing tells a fascinating story of how the modern system of grant getting and grant giving evolved and how this funding process has changed the way laboratory scientists make their careers and do their work This book is a rich historical tapestry of people institutions and scientific ideas It will stand for a long time as a source of precise and detailed information about an important aspect of the scientific enterprise It also contains many valuable lessons for the coming years John Ziman Times Higher Education Supplement

Measurement, Judgment, and Decision Making Michael H. Birnbaum, 1997-11-27 Measurement Judgment and Decision Making provides an excellent introduction to measurement which is one of the most basic issues of the science of psychology and the key to science Written by leading researchers the book covers measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making Each chapter provides a useful handbook summary and unlocks the door for a scholar who desires entry to that field Any psychologist who manipulates an independent variable that affects a psychological construct or who uses a numerical dependent variable to measure a psychological construct will want to study this book Written by leading researchers in fields of measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making Provides basic definitions and summaries of theories Presents summaries and citations to relevant literature Contains new developments current controversies and open questions Explains relationships among fields and historical links Scientific and Technical Aerospace Reports, 1995

Cultivating Development David Mosse, 2004-11-20 What if development agencies and researchers are not driven by policy Suppose that the things that make for good policy policy that legitimises and mobilises political support in reality make it impossible to implement By focusing in detail on the unfolding activities of a development project in western India over more than ten years as it falls under different policy regimes this book takes a close look at the relationship between policy and practice in development David Mosse shows how the actions of development workers are shaped by the exigencies of organisations and the need to maintain relationships rather than by policy but also that development actors work hardest of all to maintain coherent representations of their actions as instances of authorised policy Raising unfamiliar questions Mosse provides a rare self critical reflection on practice while refusing to endorse current post modern dismissal of development

Payne,Alistair J. Hobday,Brian R. MacKenzie,Desiree Tommasi,2019-06-28 Tremendous advances in oceanographic observing and modeling systems over the last decade have led to unprecedented developments in the nature of information available to marine science While improvements in observational technologies and networks have garnered much attention remarkable developments in forecasting the ocean have received much less focus Exploiting this new predictive skill to improve scientific understanding generate advice and aid in the management of marine resources is emerging as one of the new challenges of marine science Translating predictions of the physical environment into biological outcomes however is not straightforward Fisheries scientists for example have been trying to understand the links between physics and biology and generate predictions of variables such as recruitment for close to a century with limited success Nevertheless spatial distributions and the timing of key events which have received less focus are often tightly linked to the physical environment and may have management relevant applications The first such forecasts based on this skill are now starting to emerge This *Frontiers in Marine Science Research Topic* provides a snapshot of the state of the art in Marine Ecological Prediction It covers the opportunities for developing such forecasts technical approaches that could be employed and examples where the technology is already being applied This body of work therefore marks an important milestone on the route to developing this new and exciting field of marine science **Who's who Among Students in American Universities and Colleges** ,1968 **What can simple brains teach us about how vision works** Davide Zoccolan,David D. Cox,Andrea Benucci, R. Clay Reid,2015-11-18 Vision is the process of extracting behaviorally relevant information from patterns of light that fall on retina as the eyes sample the outside world Traditionally nonhuman primates macaque monkeys in particular have been viewed by many as the animal model of choice for investigating the neuronal substrates of visual processing not only because their visual systems closely mirror our own but also because it is often assumed that simpler brains lack advanced visual processing machinery However this narrow view of visual neuroscience ignores the fact that vision is widely distributed throughout the animal kingdom enabling a wide repertoire of complex behaviors in species from insects to birds fish and mammals Recent years have seen a resurgence of interest in alternative animal models for vision research especially rodents This resurgence is partly due to the availability of increasingly powerful experimental approaches e g optogenetics and two photon imaging that are challenging to apply to their full potential in primates Meanwhile even more phylogenetically distant species such as birds fish and insects have long been workhorse animal models for gaining insight into the core computations underlying visual processing In many cases these animal models are valuable precisely because their visual systems are simpler than the primate visual system Simpler systems are often easier to understand and studying a diversity of neuronal systems that achieve similar functions can focus attention on those computational principles

that are universal and essential This Research Topic provides a survey of the state of the art in the use of animal models of visual functions that are alternative to macaques It includes original research methods articles reviews and opinions that exploit a variety of animal models including rodents birds fishes and insects as well as small New World monkey the marmoset to investigate visual function The experimental approaches covered by these studies range from psychophysics and electrophysiology to histology and genetics testifying to the richness and depth of visual neuroscience in non macaque species
