Pattison, Friedrich Seifert, 2012-12-06 With the new global tectonics approach in the Earth Sciences the quantitative aspects of the dynamics of rock forming processes came into focus geologists are no longer satisfied knowing the pressure temperature conditions of the formation of a metamorphic rock or of the emplacement of a magmatic body but instead would like to learn the time history of these rocks as well i.e. derive the temperature pressure time path and relate it to a tectonic process To achieve this goal a knowledge of both pressure temperature dependent equilibria and the time scales at which these equilibria may be attained are essential However the latter kinetic information is much more difficult to retrieve than that on equilibria whereas equilibria are controlled by state variables and proper laboratory experiments may be directly applied to equilibrium natural assemblages kinetics also depends on factors other than state variables such as grain size dislocation density and especially time rate of heating duration of annealing rate of cooling Extrapolation of kinetic data obtained at high temperatures on laboratory time scales to more realistic lower temperatures and geological time scales are dangerous because for example of possible changes from an intrinsically controlled defect regime to an extrinsic one as temperature is lowered or from an interface controlled to a diffusion controlled reaction mechanism *The Earth's Mantle* Ian

Jackson, 2000 Interdisciplinary in scope The Earth's Mantle is a comprehensive overview of the composition structure and evolution of the mantle layer that strikes a balance between established consensus and continuing controversy Written by internationally recognized scientists the book provides an authoritative review of this important part of our planet Pub desc

**Mineralogical Magazine**, 1998 **Contact Metamorphism** Derrill M. Kerrick, 2018-12-17 Volume 26 of Reviews in

Mineralogy provides a multidisciplinary review of our current knowledge of contact metamorphism. As in any field of endeavor we are provided with new questions thereby dictating future directions of study. Hopefully this volume will provide inspiration and direction for future research on contact metamorphism. The Mineralogical Society of America sponsored the short course on Contact Metamorphism October 17-19, 1991 at the Pala Mesa Resort, Fallbrook, California prior to its annual meeting with the Geological Society of America.

**Micas** S.W. Bailey, 2018-12-17. Volume 13 of Reviews in Mineralogy attempts to gather together much of our knowledge of micas, the most abundant phyllosilicate, and to indicate promising areas of future research. Chapters 1-3 lay the foundations of the classification, structures, and crystal chemistry of micas. Chapter 4 treats bonding and electrostatic modeling of micas. Chapters 5 and 6 cover spectroscopic and optical properties. Chapters 7-13, the bulk of the volume, are devoted to geochemistry and petrology. These include phase equilibria and the occurrences, chemistry, and petrology of micas in igneous, metamorphic, and sedimentary rocks, pegmatites, and certain ore deposits. Some treatments are exhaustive. All are at the forefront of our present knowledge and indicate clearly the practical applications of the study of micas to ascertaining various parameters of origin and crystallization history, as well as the many problems that still exist. The aim of this type of treatment is to provide a reference volume for teachers and students and to enable researchers to pick more easily those directions and problems for which future research is most needed or is apt to be most productive or most challenging.
