Patrick Hunt, 2007 Patrick Hunt's Alpine Archaeology is born out of more than a decade of widespread high altitude archaeological field research in the Alps. The observations in this research study were made over time in a number of different field seasons and therefore gradually built up over the years. The author conducted this study while directing the Stanford Alpine Archaeological Project. Alpine archaeology is a specialized field where normal archaeological principles such as stratigraphy, pedology, data recording, anthropogenic features, materials analyses etc. apply but where contextual and climatic conditions are considerably unique. Higher altitudes and cold climate impact archaeological research and its practice in many different ways and influence the survival and preservation of both organic substances and metal objects as less oxidation and lower diffusion rates in the alpine environment noticeably inhibit the decomposition and corrosion of artifactual material. While observations in the first part of the book have been derived mostly from fieldwork in the Grand St Bernard region, those discussed in the second part are derived from the Stanford Alpine Archaeology Project's most important ongoing research which is focused on attempting to trace Hannibal's route over the Alps in 218 BCE. Hunt completed his PhD in Archaeology from the Institute of Archaeology, University of London in 1991. He is on the Classics and Archaeology faculty at Stanford University where he has been Director of the Stanford Alpine Archaeology Project since 1994. His Hannibal research is sponsored by the National Geographic Society with a grant from their Expedition Council for 2007-2008.

Numerical Data and Functional Relationships in Science and Technology, 1982 Engineering Geology and Construction Fred G. Bell, 2004-05-27 Winner of the 2004 Claire P. Holdredge Award of the Association of Engineering Geologists USA. The only book to concentrate on the relationship between geology and its implications for construction, this book covers the full scope of the subject from site investigation through to the complexities of reservoirs and dam sites. Features include international case studies throughout and summaries of accepted practice plus sections on waste disposal and contaminated land. Handbook of Applied Hydrology, Second Edition Vijay P. Singh, 2016-03-07 Fully Updated. Hydrology Principles, Methods and Applications. Thoroughly revised for the first time in 50 years, this industry standard resource features chapter contributions from a who's who of international hydrology experts. Compiled by a colleague of the late Dr. Chow, Chow's Handbook of Applied Hydrology, Second Edition covers scientific and engineering fundamentals and presents all new methods, processes and technologies. Complete details are provided for the full range of ecosystems and models. Advanced chapters look to the future of hydrology including climate change impacts, extraterrestrial water, social hydrology and water security. Chow's Handbook of Applied Hydrology, Second Edition covers The Fundamentals of Hydrology, Data Collection and Processing, Hydrology Methods, Hydrologic Processes and Modeling, Sediment and Pollutant Transport, Hydrometeorologic and Hydrologic Extremes, Systems Hydrology, Hydrology of Large River and Lake Basins, Applications and Design, The Future of Hydrology. **Multiplicity of Time Scales in Complex Systems** Bernhelm Booß-Bavnbek, Jens Hesselbjerg Christensen, Katherine Richardson, Oriol Vallès Codina, 2024-03-04 This highly interdisciplinary volume brings

together a carefully curated set of case studies examining complex systems with multiple time scales MTS across a variety of fields materials science epidemiology cell physiology mathematics climatology energy transition planning ecology economics sociology history and cultural studies The book addresses the vast diversity of interacting processes underlying the behaviour of different complex systems highlighting the multiplicity of characteristic time scales that are a common feature of many and showcases a rich variety of methodologies across disciplinary boundaries Self organizing out of equilibrium ever evolving systems are ubiquitous in the natural and social world Examples include the climate ecosystems living cells epidemics the human brain and many socio economic systems across history Their dynamical behaviour poses great challenges in the pressing context of the climate crisis since they may involve nonlinearities feedback loops and the emergence of spatial temporal patterns portrayed by resilience or instability plasticity or rigidity bifurcations thresholds and tipping points burst in excitation or slow relaxation and worlds of other asymptotic behaviour hysteresis and resistance to change Chapters can be read individually by the reader with special interest in such behaviours of particular complex systems or in specific disciplinary perspectives Read together however the case studies opinion pieces and meta studies on MTS systems presented and analysed here combine to give the reader insights that are more than the sum of the book s individual chapters as surprising similarities become apparent in seemingly disparate and unconnected systems MTS systems call into question naive perceptions of time and complexity moving beyond conventional ways of description analysis understanding modelling numerical prediction and prescription of the world around us This edited collection presents new ways of forecasting introduces new means of control and perhaps as the most demanding task it singles out a sustainable description of an MTS system under observation offering a more nuanced interpretation of the floods of quantitative data and images made available by high and low frequency measurement tools in our unprecedented era of information flows Chapter Multiplicity of Time Scales in Blood Cell Formation and Leukemia is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com [History of Science, Philosophy and Culture in Indian Civilization: pt. 1.
