Molecular Architecture and Dynamics of Meiotic Chromosomes Ricardo Benavente, Mónica Pradillo, Pedro A. San-Segundo, 2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals plants and fungi Haploidization requires that meiotic cells undergo a series of unique processes namely pairing synapsis recombination and segregation of homologous chromosomes This involves profound meiosis specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation Despite this enormous complexity different organisms may achieve haploidization through common molecular mechanisms A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques *Regulation of Microvillar Architecture by the EBP50 PDZ Domain Interacting Protein EP164* Abraham Hanono, 2006 Manual of Clinical Microbiology, 4 Volume Set Karen C. Modern Methods in Analytical Morphology J. Gu, G.W. Hacker, 2012-12-06 While advances in modern medicine largely parallel our understanding of morphology discoveries in morphology are propelled by developments of new tools and means to visualize and measure tissue elements The invention of dissecting light fluorescence and electron microscopes together with advances in labeling and staining techniques are among the stepping stones of morphological progress Today we are in an exciting new era when classical morphology is being combined with developments from other disciplines The combination

of morphology and immunology resulted in immunocytochemistry morphology and molecular biology led to in situ hybridization and in situ PCR Adding computer science to morphology gave birth to image analysis Combining laser technology and the microscope evolved into confocal microscope For more than a decade modern morphology has continued to develop by merging with other disciplines at a rate that is still gathering momentum providing exciting and dynamic new frontiers for other biological fields Modern Methods in Analytical Morphology based largely on the First International Workshop on Modern Methods in Analytical Histochemistry is an updated review of the current trends in the field It covers an extensive array of new technical developments in major disciplines of modern morphology The authors are not only leaders in their fields but also have extensive hands on experience with bench work Their chapters are written in a comprehensive manner including discussion of both theoretical considerations and practical applications to give the readers a broad view of the topics covered

COVID-19 booster vaccination: increasing immunity against life-threatening infection Ritthideach Yorsaeng, Abanoub Riad, 2024-01-25 Although COVID 19 full prime vaccination generates immunity against severe and life threatening infections there are still cases of breakthrough infections This might be due to several causes such as the fact that full prime vaccination might not generate enough immunity that immunity wanes over time or that the elderly immunocompromised transplant recipients and people with underlying diseases could suffer severe infections regardless of vaccination Moreover emerging new variants of concern such as Delta or Omicron that are highly infective and evade immunity could increase breakthrough infection Booster shots could increase immunity and reduce the likelihood of having severe COVID and post COVID 19 long COVID Immunocompromised or transplant recipients could generate immunity after booster shots even if they did not develop immunity after full prime Moreover booster shots not only protect vaccinated individuals but they could also reduce the impact on lifestyle public health and economics This research topic aims to focus on the effect of COVID 19 booster shots and the evidence seen in animal models clinical trials real world evidence and systematic reviews

Metabolic Reactions in the Nervous System Abel Lajtha, 2013-11-21 When the projected volumes of the Handbook are completed most of our current knowledge of the biochemistry of nervous systems will have been touched upon A number of the chapters will have dealt with the correlations of the biochemical findings with morphological and physiological parameters as well Considering the abysmal lack of such attempts even in the recent past this is a sign of great progress If the reader's eventual goal is to derive the laws that relate

various aspects of animal and human behavior to underlying physiological and biochemical function these admirable volumes will help him to establish a firm biochemical base from which to operate It is certain that the future approaches to the various problems of the information processing functions of the nervous system will require an integrated understanding of the essence of all of the scientific disciplines which are grouped under the general name of neuro biology The rich feast of information offered up in this Handbook will enable those in the non chemical disciplines to pick and choose those areas of chemical information pertinent to their immediate interests Similar types of compendia by physiologists anatomists cyberneticists and psychologists have been helpful to chemists and continue to be so **Biotechnology** David P.
