Research Methods and Techniques in Architecture Elzbieta Danuta Niezabitowska, 2018-07-11 A scientific

approach to architectural and architectonic research from the scope of just one discipline is no longer sufficient. With contemporary considerations such as behavior health and environmental protection, architects and students alike need holistic research methodologies that incorporate qualitative elements as well as more traditional quantitative ones. Research Methods and Techniques in Architecture examines research methodologies and tools applied in science and architectonic practice. Beginning with a thorough introduction to the main scientific, environmental, and architectural theories of the late twentieth century, the book guides the reader through the different aspects of architectural research design, building research teams, choosing applicable research methods, and representing research results.

Architectural Research Methods Wang, 2002-03-01

Landscape Architectural Research M. Elen Deming, Simon Swaffield, 2011-04-12

A practical single source guide to successful strategies for landscape architecture research. As the scope of landscape architecture expands to engage with other disciplines and streams of information, directing this field continues to grow and diversify. It becomes increasingly important for landscape architects to be able to implement a range of effective research strategies when seeking, creating, and validating knowledge. Landscape Architecture Research offers a framework for advancing better design thinking solutions by supplying readers with a system of inquiry tactics that open up a wider range of research possibilities. With a logical and innovative approach that favors legitimacy of knowledge based on collective grounded practices rather than strict adherence to protocols drawn only from scientific models, this comprehensive illustrated guide produces a sound argument for establishing a new paradigm for legitimizing research quality. Landscape Architecture Research presents case studies that show how the range of presented research strategies have been successfully used in practice. New perspective on the relationship between theory, research practice, and critique: a relationship that is specific to landscape architecture. Detailed coverage of the ways that new knowledge is produced through research activities and practical innovations in landscape architecture. The first and only book on this topic of growing importance in landscape architecture. Landscape Architecture Research keeps professionals and students in step with the latest developments in landscape architecture and delivers a dynamic and flexible game plan for verifying the integrity of their work.
