Remapping 'formal' design process with projects (not) and the world (beyond them)

Even though we attempt to accumulate formal knowledge through trial and error only, this series cannot hide behind indifference. Each of the projects needs to be an exercise in economy of means, but more importantly a search for a valid set of principles. If the success of the project cannot be evaluated in a measured complexity, economy of the plan or a promise of any kind, how can we judge its relevance?

Having been freed from the need to convey semantic content, the big box might be able to read and interpret the specificity of the domain, even without resorting to its intrinsic genericity. A pragmatic approach towards technology, a certain tolerance towards the program and the expectations of the design are the key.
