Art and Architecture in the Islamic Tradition Mohammed Hamdouni Alami, 2013-12-20 What is art in the sense of the Islamic tradition Mohammed Hamdouni Alami argues that Islamic art has historically been excluded from Western notions of art that the Western aesthetic tradition's preoccupation with the human body and the ban on the representation of the human body in Islam has meant that Islamic and Western art have been perceived as inherently at odds However the move away from this anthropomorphic aesthetic in Western art movements such as modern abstract and constructivist painting have presented the opportunity for new ways of viewing and evaluating Islamic art and architecture This book questions the very idea of art predicated on the anthropocentric bias of classical art and the corollary exclusion of Islamic art from the status of art It addresses a central question in post classical aesthetic theory in as much as the advent of

modern abstract and constructivist painting have shown that art can be other than the representation of the human body that art is not neutral aesthetic contemplation but it is fraught with power and violence and that the presupposition of classical art was not a universal truth but the assumption of a specific cultural and historical set of practices and vocabularies Based on close readings of classical Islamic literature philosophy poetry medicine and theology along with contemporary Western art theory the author uncovers a specific Islamic theoretical vision of art and architecture based on poetic practice politics cosmology and desire In particular it traces the effects of decoration and architectural planning on the human soul as well as the centrality of the gaze in this poetic view in Arabic nazar while examining its surprising similarity to modern theories of the gaze Through this double gesture moving critically between two traditions the author brings Islamic thought and aesthetics back into the realm of visibility addressing the lack of recognition in comparison with other historical periods and traditions This is an important step toward a critical analysis of the contemporary debate around the revival of Islamic architectural identity a debate intricately embedded within opposing Islamic political and social projects throughout the world

Architecture and the Unconscious John Shannon Hendrix, Lorens Eyan Holm, 2016-06-17 There are a number of recent texts that draw on psychoanalytic theory as an interpretative approach for understanding architecture or that use the formal and social logics of

architecture for understanding the psyche But there remains work to be done in bringing what largely amounts to a series of independent voices into a discourse that is greater than the sum of its parts in the way that say the architect Peter Eisenman was able to do with the architecture of deconstruction or that the historian Manfredo Tafuri was able to do with the Marxist critique of architecture The discourse of the present volume focuses specifically for the first time on the subject of the unconscious in relation to the design perception and understanding of architecture It brings together an international group of contributors who provide informed and varied points of view on the role of the unconscious in architectural design and theory and in doing so expand architectural theory to unexplored areas enriching architecture in relation to the humanities The book explores how architecture engages dreams desires imagination memory and emotions how architecture can appeal to a broader scope of human experience and identity Beginning by examining the historical development of the engagement of the unconscious in architectural discourse and the current and historical theoretical and practical intersections of architecture and psychoanalysis the volume also analyses the city and the urban condition

The Architect, 1892 *Only Connect* John K.G. Shearman, 2023-10-17 A leading art historian's plea for a more engaged reading of Italian Renaissance art Only Connect constructs a history of Renaissance paintings and sculptures that are by design completed outside themselves by the spectator that draw the spectator into their narrative plot or aesthetic functioning and that reposition the spectator imaginatively or in time and space John Shearman's concern is mostly with anterior relationships with the viewer that is relationships conceived and constructed as part of a work's design making and positioning He proposes unconventional ways in which works of art may be distinguished from one another and in which spectators may be distinguished as well and enlarges the accepted field of artistic invention Only Connect challenges us to recognize the presuppositions of Renaissance artists about their viewers shining a light on the process of discovery by some of the most inventive and intellectual artists of the period

century from pre revolutionary movements to the present The interdisciplinary approach of the volume shows that migr networks were not confined to a particular segment of culture but united composers artists critics and even diplomats On the whole the contributions to this volume document the fascinating diversity the internal contradictions as well as the impact that the largest and most durable migr movement of the 20th century had on European cultural life [The Structurist](#) ,2007
