FNA Cytology in the Diagnosis of Lymphoma Lambert

Skoog,2009 A comprehensive color manual Fine needle aspiration FNA became important for the cytology of the enlarged lymph node in the 1950s and 1960s and was accepted in the diagnosis of various types of lymphadenitis and metastatic disease The diagnosis of lymphoma by FNA cytology however remained controversial for many years as FNA smears did not allow the evaluation of growth pattern Only later with the introduction of immunocytochemistry on FNA material it became possible to conclusively diagnose the majority of lymphomas with an accuracy comparable to that of histopathology Other ancillary techniques such as FISH and PCR can now also be applied successfully to FNA material These facts together with the excellent clinical performance of FNA sampling should increase the spread of the technique This comprehensive manual presents the cytomorphologic and immunocytochemical characteristics of both non Hodgkin and Hodgkin lymphomas It discusses the technical methodological aspects of lymphoma diagnosis and describes the cytologic features of reactive lymphoid lesions and the major types of neoplastic lymphoid lesions based on the most recent 2001 WHO lymphoma classification Key cytologic and immunologic features are listed to facilitate a conclusive diagnosis of the different lesions This publication will be of immense value to clinicians such as cytopathologists pathologists oncologists and hematologists involved in the clinical work up and management of patients with lymph node lesions Transabdominal Fine-needle Aspiration Biopsy Grace Chia-yu Hsu Yang,Liang-Che Tao,2007 Over 1 350 illustrations in 350 innovative composite figures designed to teach general pathologists the cytologic approach and cytologists the histologic basis for cytologic criteria CD ROM containing high resolution composite images that can be enlarged to the size of computer screen and detailed legends with clinical presentation cytologic clues with different stains from low to high magnification as well as the mistakes made and lessons learned Pathologic entities are arranged in the current classifications used by surgical pathologists so that they can translate their experience in histopathology to cytopathology New classifications of tumors based on advances in cytogenetic and molecular evidence and all new illustrated cases from G C H Yang s collection A new chapter on gynecologic tumors has been added The chapter on malignant lymphoma has been completely rewritten to incorporate current WHO classifications New tumors discovered in the past 16 years and new classifications of adrenal kidney liver and pancreatic tumors have been added The objective of this book is to share authors combined 30 years experience in the fine needle aspiration biopsy diagnosis of organs beneath the diaphragm with general pathologists Starting from the basics this book progresses to in depth cytomorphologic analysis with histologic and immunohistochemical confirmation of specific entities Cytohistological correlation is emphasized by using composite images from either resected tumor or the cell block whenever possible In addition ultrastructural basis of cytological features is emphasized Both cytology and electron microscopy classify tumors by meticulously analyzing the cytoplasmic features and cell junctions of scanty sample Every histopathology entity should have a counterpart in cytopathology since both derive from the same entity undergoing the same pathological process The difference is in the artifacts thus an attempt was made to explain the artifacts of aspiration cytology so that

histopathologists may understand the cytologic approach and learn to interpret aspiration cytology with confidence
