Architectural Graphic Standards Manual:

Architectural Graphic Standards American Institute of Architects, Dennis J. Hall, Nina M. Giglio, 2016-03-21 The Architect's Bible since 1932 updated with the latest codes and standards Architectural Graphic Standards is the written authority for architects, designers and building contractors. It provides comprehensive guidance on the visual representation of materials, products, systems and assemblies. Updated to reflect the most current codes and standards, this new 12th edition features over 300 new drawings, tables and designs and twenty-five percent new content. In response to architects' feedback and overwhelming demand for a more graphics-heavy format, this edition employs shorter, more accessible texts and more images of the standards and evolution of design and construction. New coverage includes building resiliency and the building envelope, expert discussion on the fundamentals of design and construction documentation and new examination of environmental factors and material properties and performance. Sustainable Design is no longer separated but incorporated throughout and extensive appendices keep useful data right at your fingertips. Graphic standards are essential to building design. They cover everything from door frames and roof designs to air ducts and outdoor sports facilities. This meticulous resource provides a compendium of planning standards, optimum dimensions and normative construction details. The book is organized into three core sections covering design and documentation, materials and building elements. Architectural Graphic Standards features Key architectural design and production processes, functional planning, environmental assessment, building resiliency and architectural construction documentation. Thorough coverage of materials: concrete, masonry, metals, wood, plastics, composites and glass. An exhaustive survey of building elements: substructures, shells, services, equipment, furnishings, special structures and siteworks. Comprehensive appendixes filled with pertinent data such as classic architectural elements, mathematical data and structural calculations. Endorsed by the American Institute of Architects, this book has an enduring and unsurpassed reputation for high-quality illustration, text and graphic design. For crucial information in a user-friendly format, Architectural Graphic Standards is the go-to reference on building design and construction.

Reconstructing Italy Stephanie Zeier Pilat, 2016-04-08 Reconstructing Italy traces the postwar transformation of the Italian nation through an analysis of the Ina Casa plan for working class housing established in 1949 to address the employment and housing crises Government sponsored housing programs undertaken after WWII have often been criticized as experiments that created more social problems than they solved The neighborhoods of Ina Casa stand out in contrast to their contemporaries both in terms of design and outcome Unlike modernist high rise housing projects of the period Ina Casa neighborhoods are picturesque and human scaled and incorporate local construction materials and methods resulting in a rich aesthetic diversity And unlike many other government forays into housing undertaken during this period the Ina Casa plan was on the whole successful the neighborhoods are still lively and cohesive communities today This book examines what made Ina Casa a success among so many failed housing experiments focusing on the tenuous balance struck between the legislation governing Ina Casa the architects who led the Ina Casa administration the theory of design that guided architects working on the plan and an analysis of the results the neighborhoods and homes constructed Drawing on the writings of the architects government documents and including brief passages from works of neorealist literature and descriptions of neorealist films by Pier Paolo Pasolini Italo Calvino and others this book presents a portrait of the postwar struggle to define a post Fascist Italy

Governing by Design Aggregate Architectural History Collaborative, 2012-04-29 Governing by Design offers a unique perspective on twentieth century architectural history It disputes the primacy placed on individuals in the design and planning process and instead looks to the larger influences of politics culture economics and globalization to uncover the roots of how our built environment evolves In these chapters historians offer their analysis on design as a vehicle for power and as a mediator of social currents Power is defined through a variety of forms modernization obsolescence technology capital ergonomics biopolitics and others The chapters explore the diffusion of power through the establishment of norms and networks that frame human conduct action identity and design They follow design as it functions through the

body in the home and at the state and international level Overall Aggregate views the intersection of architecture with the human need for what Foucault termed governmentality societal rules structures repetition and protocols as a way to provide security and tame risk Here the conjunction of power and the power of design reinforces governmentality and infuses a sense of social permanence despite the exceedingly fluid nature of societies and the disintegration of cultural memory in the modern era Detailing for Landscape Architects Thomas R.
