Automatic Control of Atmospheric and Space Flight Vehicles Ashish Tewari, 2011-08-04 Automatic Control of Atmospheric and Space Flight Vehicles is perhaps the first book on the market to present a unified and straightforward study of the design and analysis of automatic control systems for both atmospheric and space flight vehicles Covering basic control theory and design concepts it is meant as a textbook for senior undergraduate and graduate students in modern courses on flight control systems In addition to the basics of flight control this book covers a number of upper level topics and will therefore be of interest not only to advanced students but also to researchers and practitioners in aeronautical engineering applied mathematics and systems control theory

Flight Dynamics and Control of Aero and Space Vehicles Rama K. Yedavalli, 2020-02-25 Flight Vehicle Dynamics and Control Rama K Yedavalli The Ohio State University USA A comprehensive textbook which presents flight vehicle dynamics and control in a unified framework Flight Vehicle Dynamics and Control presents the dynamics and control of various flight vehicles including aircraft spacecraft helicopter missiles etc in a unified framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as well as differences in dynamics and control issues making use of the systems level viewpoint The book begins with the derivation of the equations of motion for a general rigid body and then delineates the differences between the dynamics of various flight vehicles in a fundamental way It then focuses on the dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases Then the control systems analysis and design is carried out both from transfer function classical control as well as modern state space control points of view Illustrative examples of application to atmospheric and space vehicles are

presented emphasizing the systems level viewpoint of control design Key features Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume Contains worked out examples including MATLAB examples and end of chapter homework problems Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle dynamics and control Accompanied by a website that includes additional problems and a solutions manual The book is essential reading for undergraduate students in mechanical and aerospace engineering engineers working on flight vehicle control and researchers from other engineering backgrounds working on related topics

Computational Space Flight Mechanics Claus Weiland, 2010-06-29 The mechanics of space flight is an old discipline Its topic originally was the motion of planets moons and other celestial bodies in gravitational fields Kepler's 1571-1630 observations and measurements have led to probably the first mathematical description of planet's motion Newton 1642-1727 gave then with the development of his principles of mechanics the physical explanation of these motions Since then man has started in the second half of the 20th century to capture physically the Space in the sense that he did develop artificial celestial bodies which he brought into Earth's orbits like satellites or space stations or which he did send to planets or moons of our planetary system like probes or by which people were brought to the moon and back like capsules Further he developed an advanced space transportation system the U.S. Space Shuttle Orbiter which is the only winged space vehicle ever in operation In the last two and a half decades there were several activities in the world in order to succeed the U.S. Orbiter like the HERMES project in Europe the HOPE project in Japan the X-33, X-34 and X-37 studies and demonstrators in the United States and the joint U.S./European project X-38 However all these projects were cancelled The motion of these vehicles can be described by Newton's equation of motion

Space Flight Dynamics Craig A. Kluever, 2018-05-29 Thorough coverage of space flight topics with self-contained chapters serving a variety of courses in orbital mechanics spacecraft dynamics and astronautics This concise yet comprehensive book on space flight dynamics addresses all phases of a space mission getting to space launch trajectories satellite motion in space orbital motion orbit transfers attitude dynamics and returning from space entry flight mechanics It focuses on orbital mechanics with emphasis on two-body motion orbit determination and orbital maneuvers with applications in Earth-centered missions and interplanetary missions Space Flight Dynamics presents wide-ranging information on a host of topics not always covered in competing books It discusses relative motion entry flight mechanics low-thrust transfers rocket propulsion fundamentals attitude dynamics and attitude control The book is filled with illustrated concepts and real-world examples drawn from the space industry Additionally the book includes a computational toolbox composed of MATLAB M-files for performing space mission analysis Key features Provides practical real-world examples illustrating key concepts throughout the book Accompanied by a website containing MATLAB M-files for conducting space mission analysis Presents numerous space flight topics absent in competing titles Space Flight Dynamics is a welcome addition to the field ideally suited for upper-level undergraduate and graduate students studying aerospace engineering
